**QUESTION 1**

You are designing a highly available solution based on NetApp Cloud Volumes ONTAP that will be deployed in Google Cloud. The solution will need to grow over time to meet demand.

In this scenario, when adding disks, which two statements are true? (Choose two.)

- A. Cloud Manager creates a mirrored aggregate.
- B. Cloud Manager adds a new Cloud Volumes ONTAP instance.
- C. Cloud Manager allocates disks to both nodes.
- D. Cloud Manager allocates disks to one node.

Correct Answer: BC

QUESTION 2

You re-engineer your on-premises Infrastructure and migrating workloads to the cloud. You are asked to consider a hybrid cloud deployment.

Which two scenarios would highlight that a hybrid cloud deployment would be more appropriate for the workload in this situation? (Choose two.)

- A. when used to provide a guaranteed low latency solution for your analytics workloads
- B. when specific data in your solution is not permitted to be moved to the cloud due to regulations or policies
- C. when used to reduce management between your on-premises data center and remote locations by hosting part of your architecture in the cloud
- D. when used as a transition platform during a longer-term migration to a fully cloud-native solution

Correct Answer: CD

QUESTION 3

You are asked to develop a migration strategy for your customer that is migrating several SMB and NFS workloads from on-premises to Azure NetApp Files. In this scenario, which three technologies should you consider? (Choose three.)

- A. rsync
- B. robocopy
- C. NetApp Cloud Sync service
- D. Azure Storage Explorer
- E. SnapMirror technology

Correct Answer: BCD

QUESTION 4

You are designing a file services platform for unstructured data in Amazon Web Services (AWS). The primary workload of your data is production file shares. Based on your assessment, you notice that only 10% of your data is "hot", which equals 4 TB of storage. This active data set requires high performance storage. The remaining 36 TB of data is archive data. To achieve cost benefits, you deploy Cloud Volumes ONTAP in AWS, associate two 4 TB disks with the aggregate, and enable data tiering.

In Cloud Manager, which volume tiering policy would satisfy the requirements?

- A. Snapshot only
- B. None
- C. All
- D. Auto

Correct Answer: B

QUESTION 5

You must back up data with an option to restore a file to the same or a different location.

In this scenario, which storage type would be used as part of the NetApp Cloud Backup service?

- A. in-memory
- B. file storage
- C. object storage
- D. block storage

Correct Answer: C
