**QUESTION 1**

Which is true about HTTPS on FortiWeb? (Choose three.)

- A. For SNI, you select the certificate that FortiWeb will present in the server pool, not in the server policy.
- B. After enabling HSTS, redirects to HTTPS are no longer necessary.
- C. In true transparent mode, the TLS session terminator is a protected web server.
- D. Enabling RC4 protects against the BEAST attack, but is not recommended if you configure FortiWeb to only offer TLS 1.2.
- E. In transparent inspection mode, you select which certificate that FortiWeb will present in the server pool, not in the server policy.

Correct Answer: ACE

QUESTION 2

When FortiWeb triggers a redirect action, which two HTTP codes does it send to the client to inform the browser of the new URL? (Choose two.)

- A. 403
- B. 302
- C. 301
- D. 404

Correct Answer: BC

Reference: <https://developer.mozilla.org/en-US/docs/Web/HTTP/Status/302>

QUESTION 3

In Reverse proxy mode, how does FortiWeb handle traffic that does not match any defined policies?

- A. Non-matching traffic is allowed
- B. non-Matching traffic is held in buffer
- C. Non-matching traffic is Denied
- D. Non-matching traffic is rerouted to FortiGate

Correct Answer: C

**QUESTION 4**

How does your FortiWeb configuration differ if the FortiWeb is upstream of the SNAT device instead of downstream of the SNAT device?

- A. You must enable the "Use" X-Forwarded-For: option.
- B. FortiWeb must be set for Transparent Mode
- C. No special configuration required
- D. You must enable "Add" X-Forwarded-For: instead of the "Use" X-Forwarded-For: option.

Correct Answer: D

QUESTION 5

You are using HTTP content routing on FortiWeb. Requests for web app A should be forwarded to a cluster of web servers which all host the same web app. Requests for web app B should be forwarded to a different, single web server.

Which is true about the solution?

- A. Static or policy-based routes are not required.
- B. To achieve HTTP content routing, you must chain policies: the first policy accepts all traffic, and forwards requests for web app A to the virtual server for policy A. It also forwards requests for web app B to the virtual server for policy B. Policy A and Policy B apply their app-specific protection profiles, and then distribute that app's traffic among all members of the server farm.
- C. You must put the single web server into a server pool in order to use it with HTTP content routing.
- D. The server policy applies the same protection profile to all its protected web apps.

Correct Answer: B
