**QUESTION 1**

Which two statements about running a vulnerability scan are true? (Choose two.)

- A. You should run the vulnerability scan during a maintenance window.
- B. You should run the vulnerability scan in a test environment.
- C. Vulnerability scanning increases the load on FortiWeb, so it should be avoided.
- D. You should run the vulnerability scan on a live website to get accurate results.

Correct Answer: AB

Should the Vulnerability Scanner allow it, SVMS will set the scan schedule (or schedules) to run in a maintenance window. SVMS will advise Client of the scanner's ability to complete the scan(s) within the maintenance window. Vulnerabilities on live web sites. Instead, duplicate the web site and its database in a test environment.

**QUESTION 2**

Under which circumstances does FortiWeb use its own certificates? (Choose Two)

- A. Secondary HTTPS connection to server where FortiWeb acts as a client
- B. HTTPS to clients
- C. HTTPS access to GUI
- D. HTTPS to FortiGate

Correct Answer: AC

**QUESTION 3**

Which operation mode does not require additional configuration in order to allow FTP traffic to your web server?

- A. Offline Protection
- B. Transparent Inspection
- C. True Transparent Proxy
- D. Reverse-Proxy

Correct Answer: B

**QUESTION 4**

When FortiWeb triggers a redirect action, which two HTTP codes does it send to the client to inform the browser of the new URL? (Choose two.)

- A. 403
- B. 302
- C. 301
- D. 404

Correct Answer: BC

Reference: <https://developer.mozilla.org/en-US/docs/Web/HTTP/Status/302>

---

**QUESTION 5**

You are using HTTP content routing on FortiWeb. Requests for web app A should be forwarded to a cluster of web servers which all host the same web app. Requests for web app B should be forwarded to a different, single web server.

Which is true about the solution?

- A. Static or policy-based routes are not required.
- B. To achieve HTTP content routing, you must chain policies: the first policy accepts all traffic, and forwards requests for web app A to the virtual server for policy A. It also forwards requests for web app B to the virtual server for policy B. Policy A and Policy B apply their app-specific protection profiles, and then distribute that app's traffic among all members of the server farm.
- C. You must put the single web server into a server pool in order to use it with HTTP content routing.
- D. The server policy applies the same protection profile to all its protected web apps.

Correct Answer: B
