Refer to the exhibit.

The exhibit shows a topology where a FortiGate is split into two VDOMs, root and vd-lan. The root VDOM

VDOM provides internal access to a Web server.

For the remote users to access the internal Web server, there are a few requirements as follows:

All traffic must come from the SSL-VPN.

The vd-lan VDOM only allows authenticated traffic to the Web server.

Users must only authenticate once, using the SSL-VPN portal.

SSL-VPN uses RADIUS-based authentication.

Given these requirements and the topology shown in the exhibit, which two statements are true? (Choose

two.)

A. vd-lan connects to FortiAuthenticator as a regular FSSO client.

B. root is configured for FSSO while vd-lan is configured for RSSO.
