100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by IBM Official
Exam Center

QUESTION 1

Consider the scenario that a technical expert accidentally trips over the power cord of a DB2 pureScale cluster node, bringing the node offline. Assume the cluster contains a SECONDARY cluster caching facility and other DB2 members. What will be the outcome of this situation if the node was hosting both the PRIMARY cluster caching facility and a DB2 member?

A. The secondary cluster caching facility will become the primary. All client transactions sent to be processed by the offline server will be re-routed to the remaining members within the cluster.

B. DB2 pureScale cannot host both the cluster caching facility and a member on a single host.

C. The cluster will put all transactions on hold until the server is back online.

D. The secondary cluster caching facility will be in SYNC state. All client connections will be terminated and will need to re-issued by the client.

Correct Answer: A

QUESTION 2

Which of the following is NOT valid state for the Cluster Caching Facility?

A. ONLINE

B. PRIMARY

C. ERROR

D. PEER

Correct Answer: A

QUESTION 3

How can you verify that a DB2 installation was successful?

A. Verification is performed by running the VERIFY INSTALL command.

B. Verification is completed by the DBA using the database verification toolkit.

C. Verification is automatically performed by the AUTO_CONFIGURE feature.

D. Verification can be done by successfully creating a SAMPLE database and running SQL commands to retrieve sample data.

Correct Answer: D

QUESTION 4

Which of the following is TRUE about PL/SQL support in DB2?

A. The DB2 compiler can process PL/SQL statements and create the required objects in the database. The PL/SQL support is enabled by setting the DB2_COMPATIBILITY_VECTOR registry variable.

B. DB2 requires third party software to execute PL/SQL statements.

C. You can only execute PL/SQL statements using the CLPPIus interface.

D. PL/SQL support is only enabled when using federation to access other vendor databases.

Correct Answer: A

QUESTION 5

Consider the scenario where a client application is connected to DB2 pureScale "member 1". The DB2 pureScale environment has three DB2 pureScale members. In a situation where "member 1" fails, the client is still able to execute operations against the DB2 pureScale cluster with minimal interference. Which of the following technologies allow the client to continue performing operations?

A. Decentralized log files for member recovery.

B. Geographically Dispersed pureScale Cluster (GDPC).

C. Automatic Client Reroute.

D. Redundant cluster caching facility.

Correct Answer: C
