**QUESTION 1**

There are four types of group that can be used in the iBase designer security manager, to control the access that users have to data in an iBase database and to the iBase features. Which one of the 4 types of group denies access to specific commands? For example, a user may be able to add records but may be denied access to the Import command.

- A. Database Management group
- B. System Commands Access Control group
- C. Data Access Control group
- D. Folder Object Control group

Correct Answer: B

QUESTION 2

Which of the following false statement about iBase Designer?

- A. iBase designer allows you to add, modify and delete entity record data.
- B. iBase designer allows you to design databases
- C. iBase designer allows you to create new databases
- D. iBase designer allows you to administer the database

Correct Answer: A

QUESTION 3

All the following is true about the user who switches on and configures alerting for a database except: A. They must be a member of the SQLAgentUserRole database role - in the msdb system database, for SQL Server 2005 or later

- B. They must be an iBase system administrator.
- C. They use the iBase user module and the Format, alerting menu to configure alerting for a database
- D. They must have an SQL Server login

Correct Answer: C

**QUESTION 4**

You can check that the index service has been configured successfully for a specific database in several places: Which of the following best describes where to look?

- A. In SQL Server Management Studio, SQL Server Agent will list an i2_Search_Indexing job for the database (the Job Activity Monitor will report whether the last run was successful or whether there was an error)
- B. In the Windows Event Viewer, a started event will be listed for the database
- C. In iBase Designer, the last date and time that the index was updated will be displayed in the Search 360 Administration dialog
- D. In iBase, the last date and time that the index was updated will be displayed in the Search 360 dialog.
- E. All of the above
- F. Only C and D above

Correct Answer: E

QUESTION 5

Which of the following best describes which database actions are logged by the audit viewer database log

- A. user requested database actions from IBM i2 iBase Designer
- B. user requested database actions from IBM i2 iBase
- C. user requested database actions from IBM i2 Analyst's Notebook
- D. user requested database actions from Data Miner
- E. user requested database actions from third party mapping applications
- F. The log records all requested database actions regardless of origin
- G. Only A, and B

Correct Answer: F
