**QUESTION 1**

A customer installed multiple PVWAs in the production environment behind a load balancer VIP. They subsequently observed that all incoming traffic from the load balancer VIP goes to only one PVWA, even though all the PVWAs are up and running. What could be the likely cause of this situation?

- A. The load balancing algorithm is the least connections algorithm.
- B. The Certificate of the load balancer is not a wild card cert
- C. The load balancing pool only has one PVWA server
- D. SSL passthrough is not configured on the load balancer.

Correct Answer: C

QUESTION 2

As long as you are a member of the Vault Admins group, you can grant any permission on any safe that you have access to.

- A. TRUE
- B. FALSE

Correct Answer: B

Being in Vault admins group only give you access to safes which are created during installation (safe created in installation process)-This is clearly mentioned in documents .

QUESTION 3

You have been asked to secure a set of shared accounts in CyberArk whose passwords will need to be used by end users. The account owner wants to be able to track who was using an account at any given moment.

Which security configuration should you recommend?

- A. Configure one-time passwords for the appropriate platform in Master Policy.
- B. Configure shared account mode on the appropriate safe.
- C. Configure both one-time passwords and exclusive access for the appropriate platform in Master Policy.
- D. Configure object level access control on the appropriate safe.

Correct Answer: C

QUESTION 4
