**QUESTION 1**

What do you configure in the Context section of a data transform rule that you create in Pega Platform?

- A. The application layer, class, and ruleset version that the rule applies to
- B. The rule types that you previously marked as relevant records
- C. The case types, user portals, and personas that use the rule
- D. The application name rule type label, and rule identifier

Correct Answer: A

Explanation: The context section of a data transform rule defines the scope and applicability of the rule. It specifies the application layer, such as framework or implementation, the class that the rule applies to, and the ruleset version that contains the rule. **QUESTION 2**

Select each task on the left and drag it to the corresponding Application Development Studio on the right, where the task can be completed.

Select and Place:

**Task**

Review real-time UI designs with stakeholders.

Monitor the cloud-based production system at run-time.

Configure application security, versioning, and source control.

Globally configure the setting for an Artificial Intelligence model.

**Task****Application Development Studio**

App Studio

Dev Studio

Admin Studio

Prediction Studio

Correct Answer:

**Task**

**Task**

Review real-time UI designs with stakeholders.

Configure application security, versioning, and source control.

Monitor the cloud-based production system at run-time.

Globally configure the setting for an Artificial Intelligence model.

**Application Development Studio**

App Studio

Dev Studio

Admin Studio

Prediction Studio

**QUESTION 3**

A developer configures a button with the action set as shown in the below image Place the events in the order they occur.

Click

Refresh-This section

Target: Section

Data Transform: SetDefaultValues

Conditions

When: Add a condition

Set Value

Property: .Order.OrderID

Value: .ConfirmationNumber

Conditions

When: When Rule

PaymentConfirmed

Add a condition

Select and Place:

Events

0	The system refreshes the section.	0
0	The system applies a data transform.	0
0	The order ID value is set to the value of the confirmation number if the system confirms the payment.	0
0	A user clicks the button.	0

Order events occur

0		0
0		0
0		0
0		0

Correct Answer:

Events

Order events occur

0	A user clicks the button.	0
0	The system applies a data transform.	0
0	The order ID value is set to the value of the confirmation number if the system confirms the payment.	0
0	The system refreshes the section.	0

#### QUESTION 4

You are designing a credit transaction case type and have the following requirement: Transaction disputes must be resolved within 3 days.

To meet this requirement you need to set the \_\_\_\_\_ in the service level to 3 days Available Choices (select all choices that are correct)

- A. goal
- B. passed deadline
- C. deadline
- D. urgency

Correct Answer: C

Explanation: To meet this requirement, you need to set the deadline in the service level to 3 days. The deadline defines when to take action because a step or case is past due. The deadline interval is measured from when an assignment is ready for a user. References: <https://academy.pega.com/topic/deadline-interval/v1>

---

#### QUESTION 5

A company often receives multiple IT tickets for the same issue, such as "the office Wi-Fi is down " You configure a Search duplicate cases step to identify duplicate IT tickets.

What is the basic condition for the Search duplicate cases step?

Available Choices (select all choices that are correct)

- A. Issue type is same
- B. Name of submitter is same
- C. Department is same
- D. Office location is same

Correct Answer: A

Explanation: The basic condition for the Search duplicate cases step is to compare the issue type of the current case with the issue type of existing cases. This way, only cases that have the same issue type are considered as potential duplicates. References: <https://community.pega.com/knowledgebase/articles/case-management/88/searching-duplicate-cases>
