Correct Answer: C

---

#### QUESTION 5

An existing, released application applies a rule instance to a specific work type. You wish to apply this rule to a less-specialized class in the next release of the application. Select the best method to accomplish this task. (Choose One)

- A. Unlock any RuleSet version that contains the rule instance, and delete each instance applied to the work type. Then, create a new instance applied to the less-specific class
- B. Create two new instances of the rule. one applied to the work type, with availability set to Blocked, and the other applied to the less-specific class with availability set to Yes
- C. Create two new instances of the rule. one applied to the work type and saved to a RuleSet that end-users cannot access, and the other applied to the less-specific class and saved to a RuleSet that end users can access
- D. Create two new instances of the rule. one applied to the work type, with availability set to Withdrawn, and the other applied to the less-specific class with availability set to Yes
- E. Use a decision table or decision tree to call the less-specialized instance when the user runs the most-recent version of the application

Correct Answer: D
