QUESTION 1

You have a requirement to populate a list of allowed values sourced from a database table. The list of allowed values varies based on the context in which the list is used.

Which implementation maximizes reusability?

- A. Create a data page sourced with a report definition. Use parameters to specify a filter condition to retrieve specific results based on context.
- B. Create a data page and report definition for each context. Use parameters to filter the results of the response data transform.
- C. Create a data page sourced with a connector. Specialize the data page by class based on context.
- D. Create a data page sourced with a report definition. Circumstance the report definition based on context

Correct Answer: B
