**QUESTION 1**

A manager requests a report that contains the following columns: Create Date, Case ID, Create Operator, and Work Status. You must sort the cases so the case with the most recent create date appears at the top of the list and descends in order.

How do you design the report definition to support this requirement?

- A. Add a filter condition where Create Date is greater than the current date.
- B. Make the Create Date the first column in the report.
- C. Select Highest to Lowest sort type for Create Date.
- D. Select Lowest to Highest sort type for Create Date.

Correct Answer: C

QUESTION 2

A home loan application requires approvals from the Legal team manager and the Finance team manager. The Legal team manager must approve before the Finance team manager. How do you configure this requirement?

- A. Create an approval process for each manager in parallel.
- B. Apply business logic to route a single assignment in the correct order.
- C. Create an approval step with cascading approval.
- D. Route an assignment to a work queue where both roles have access.

Correct Answer: C

QUESTION 3

To qualify for an instant loan, an applicant must earn a monthly income of at least GBP2000 and cannot exceed GBP20000 in total liability. How do you enforce these restrictions when requesting an instant loan?

- A. Use a Validate rule to call two Edit validate rules: one for income and one for liability.
- B. Use two Edit Validate rules: one for income and one for liability.
- C. Use a single Validate rule with two conditions: one for income and one for liability.
- D. Use UI controls to validate the entries in the income and liability fields.

Correct Answer: C

QUESTION 4

A data page holds product information. The data page's Reload if older Than field is set to 15 minutes.

The data page is created at 06:12.

At 06:20 the user requests product information.

At 06:42 the user requests product information.

When is the data page reloaded?

A. 06:35

B. 06:20

C. 06:27

D. 06:42

Correct Answer: A

QUESTION 5

Customers on a hotel booking application can add additional amenities to their reservation. The application displays a view with the available amenities, descriptions and costs. To reduce scrolling, the content is organized into multiple areas. Each area is accessed using a drop down menu that lists each amenity.

How do you configure the user interface to improve access to the content and achieve the business requirement described?

A. Configure a disable when condition on each field to allow access when the associated amenity is selected on the drop down control.

B. Configure a repeating dynamic layout with an embedded section for each amenity and set the layout

C. format to grouped.

D. Configure a layout group to separate each amenity into individual panels and set the layout to a menu format.

E. Configure a visible when condition on the drop down control to display each section when the associated amenity is selected.

Correct Answer: A
