#### QUESTION 1

A \_\_\_\_\_ defines the look and feel of an application.

- A. Format
- B. control
- C. skin
- D. mixin

Correct Answer: C

---

#### QUESTION 2

Which two of the following statements are the most accurate with respect to the error handler flow? (Choose Two)

- A. The standard connector error handler flow can help recover from transient errors.
- B. The error handler flow is invoked if the error is not handled elsewhere.
- C. The error handler flow is the recommended way to handle all integration errors.
- D. The standard error handler flow is final and cannot be customized.

Correct Answer: AB

---

#### QUESTION 3

Items selected by a user need to be copied to a page list property when the user submits the form. How do you copy the items?

- A. Create a validate rule to copy the selected items.
- B. Create a declare expression with the page list property as the target.
- C. Add a data transform to the flow action as a pre-processing action.
- D. Add a data transform to the flow action as a post-processing action.

Correct Answer: C

---

#### QUESTION 4

A flow action calls a pre-processing data transform to initiate values. There are several flow actions available for the assignment. You want to make sure that the values are only initiated once for each flow action. How do you implement a solution?

- A. Do nothing. The pre-processing data transform is only called once for each assignment.
- B. Make sure that the flow action does not have the highest likelihood since it will always be invoked.
- C. Configure the data transform as post-processing instead of pre-processing.
- D. Add logic to the pre-processing data transform to test if values were already initiated.

Correct Answer: D

## QUESTION 5

You have added a cascading approval step that uses an authority matrix. You have specified a decision table to determine the approvers for each case. You have confirmed that the conditions in the decision table are configured correctly. You test the configuration by entering requests that require multiple approvers. However, the system routes all requests to only one approver. Which of the following actions would you take to correct this issue?

- A. Add an approval level for each approver.
- B. Add a row to the decision table that evaluates the submitter's workgroup manager.
- C. Set the decision table to evaluate all rows.
- D. Specify a page list for the authority matrix.

Correct Answer: C
