**QUESTION 1**

Which two of the following statements are the most accurate with respect to the error handler flow? (Choose Two)

- A. The standard connector error handler flow can help recover from transient errors.
- B. The error handler flow is invoked if the error is not handled elsewhere.
- C. The error handler flow is the recommended way to handle all integration errors.
- D. The standard error handler flow is final and cannot be customized.

Correct Answer: AB

QUESTION 2

A data page is used to retrieve data from an external system. If an error occurs, you want to display a message to the user and send an email to the system administrator.

How do you implement this requirement?

- A. Invoke the connector from an activity and use standard Obj- methods to add an error message and send an email.
- B. Create a custom error handler flow that displays the error message and sends an email.
- C. Create an error handler data transform that adds an error message to the data page and sends an email.
- D. Configure an error handling process that displays the error message and sends an email.

Correct Answer: C

QUESTION 3

Identify two options for passing data between a Pega application and a webpage containing a web mashup. (Choose two.)

- A. Use the attribute data-pega-event-onpagedata.
- B. Use REST methods to call Pega microservices.
- C. Call a Pega API function from the host server.
- D. Call the function `pega.web.api.doAction()`.

Correct Answer: AD
