QUESTION 1

DRAG DROP

You plan to implement a data loss prevention (DLP) policy for a production environment.

You need to define the policy.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

- Define the scope and add all environments to the policy.
- Classify and assign connectors.
- Review and create the policy.
- Define the scope and add the environment to the policy.
- Name the policy.
- Add new tenant rules.

Answer Area

Four empty green boxes for the answer sequence.

Correct Answer:

Actions

Define the scope and add all environments to the policy.

Add new tenant rules.

Answer Area

Name the policy.

Classify and assign connectors.

Define the scope and add the environment to the policy.

Review and create the policy.

To create a DLP policy, you need to follow these steps1:

Name the policy.

Classify and assign connectors.

Define the scope and add the environment to the policy. (This step doesn't apply to environment-level policies)

Review and create the policy.

QUESTION 2

You need to configure permissions for the Purchase order quantity flow. Which permission should you assign?

- A. Co-owner
- B. Run-only user
- C. Owner

D. User

Correct Answer: B

To configure permissions for the Purchase order quantity flow, you should assign the run-only user permission to the finance clerk. This will allow them to run the flow without being able to edit or share it1. The other permissions are not suitable for this scenario because:

1.

Co-owner permission would give the finance clerk full access to edit, share, and delete the flow, which is not necessary or desirable1.

2.

Owner permission would transfer the ownership of the flow to the finance clerk, which would remove your access and control over it1.

3.

User permission would not allow the finance clerk to run the flow at all, only to view it1.

QUESTION 3

DRAG DROP

A company uses an enterprise resource planning (ERP) system. The ERP system has an API.

The company requires a custom connector for the ERP system.

You need to create the custom connector.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

- Enter name and host details.
- Test the connection.
- Define actions and triggers.
- Identify authentication type.

Answer area

Correct Answer:

Actions

-
-
- Define actions and triggers.
-

Answer area

- Enter name and host details.
- Identify authentication type.
- Test the connection.

QUESTION 4

You need to package the automations. What should you do?

- A. Show dependencies within the solution.
- B. Remove unmanaged layers.
- C. Add required components to each item within the solution.
- D. Add existing components to the solution.

Correct Answer: C

QUESTION 5

DRAG DROP

You have a machine that runs an automation solution.

You need to move the machine to a different environment.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Select the new environment.

Launch Power Automate – Machine runtime.

Navigate to <http://flow.microsoft.com/> and then select the connection.

Launch the Power Apps Maker portal and select the machine.

Select the existing environment.

Select **Refresh**.

Answer Area

Correct Answer:

Actions

Navigate to <http://flow.microsoft.com/> and then select the connection.

Launch the Power Apps Maker portal and select the machine.

Select the existing environment.

Answer Area

Launch Power Automate – Machine runtime.

Select the new environment.

Select **Refresh**.
