QUESTION 1

HOTSPOT

You need to recommend a collaboration tool for each group.

Which tool should you use? To answer, select the appropriate tool in the answer area.

NOTE: Each correct selection is worth one point.
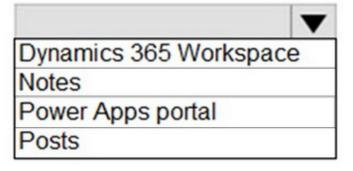

Hot Area:

Answer Area

Group	Tool
Maintenance supervisors	▼ Microsoft Teams / Notes / Power Apps portal / Posts
Aircraft maintenance vendors	▼ Dynamics 365 Workspace / Notes / Power Apps portal / Posts

Correct Answer:

Answer Area

Group	Tool
Maintenance supervisors	**Microsoft Teams** ▼ / Notes / Power Apps portal / Posts
Aircraft maintenance vendors	**Dynamics 365 Workspace** ▼ / Notes / Power Apps portal / Posts

Box 1: Microsoft Teams

Maintenance supervisors must not have access to Dynamics 365 Customer Service. The supervisors must be able to communicate with the contracts team about contracts.

Box 2: Dynamics 365 Workspace

Aircraft maintenance vendors must have only view and upload privileges to their invoices and receipts.

The Expense management mobile workspace lets users capture and upload a receipt, so that they can attach it to an expense report later.

QUESTION 2

A pharma company uses a proprietary system to manage its chemical experiments. The company uses Microsoft Dynamics 365 Project Operations to manage lab staff and resources.

Employees manually update Project Operations data with data from their proprietary system as needed. Employees are not able to provide a definite schema for their data.

You need to provide a solution that will allow employees to configure their own automatic updates.

Which component should you use?

A. Dataflows

B. Custom connectors

C. Data gateways

D. Microsoft Power Automate flows

Correct Answer: D

QUESTION 3

HOTSPOT

You need to recommend components to meet the re-inspection requirements.

Which components should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Requirement	Component

Initiate the creation of re-inspection orders.

▼
Dataflow
Business rule
Power Automate flow

Automatically set overall inspection ratings based on the checklist ratings.

| ▼ |
|---|
| From event |
| Business rule |
| Custom action |
| Rollup data type |

Correct Answer:

Answer Area

Requirement	Component

Initiate the creation of re-inspection orders.

▼
Dataflow
Business rule
Power Automate flow

Automatically set overall inspection ratings based on the checklist ratings.

▼
From event
Business rule
Custom action
Rollup data type

Box 1: Power Automate flow

Scenario: Inspection orders must be automatically marked for re-inspection should a machine fail inspection. The new inspection order must be created by using the originating inspection order as a template.

Box 2: Business rule

By combining conditions and actions, you can do any of the following with business rules:

1.

Set column values

2.

Clear column values

3.

Set column requirement levels

4.

Show or hide columns

5.

Enable or disable columns

6.

Validate data and show error messages

7.

Create business recommendations based on business intelligence.

QUESTION 4

HOTSPOT

You are designing a model-driven app that provides marketing, sales, and service operations to a company.

The app must integrate with the following systems and data sources:

1.

A third-party marketing system for lead generation and website submissions.

2.

A Microsoft Excel Online file that contains manufacturing data on relevant products.

3.

A separate Microsoft Dataverse environment.

You need to recommend Power Automate connectors for the app.

Which connectors should you recommend? To answer, select the appropriate options in the answer area.
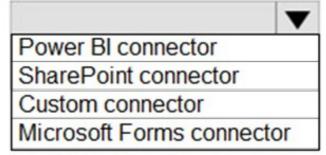

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Data source	Connector type
Third-party marketing system	▼
	Power BI connector
	SharePoint connector
	Custom connector
	Microsoft Forms connector
Microsoft Dataverse environment	▼
	SharePoint
	Azure Data Factory
	Microsoft Dataverse

Correct Answer:

Answer Area

Box 1: Custom connector While Azure Logic Apps, Microsoft Power Automate, and Microsoft Power Apps offer over 325+ connectors to connect to Microsoft and non-Microsoft services, you may want to communicate with services that aren\\'t available as prebuilt connectors.

Box 2: Microsoft Dataverse The Microsoft Dataverse connector provides several triggers to start your flows and many actions that you can use to create or update data in Dataverse while your flows run. You can use Dataverse actions even if your flows don\\'t use a trigger from the Dataverse connector.

Use the Microsoft Dataverse connector to create cloud flows that start when data changes in Dataverse tables and custom messages.

QUESTION 5

You are designing an integration between an Azure SQL database and a model-driven app.

You have the following requirements:

Audit updates to the data.

Assign security role access to tables at the user level.

Assign security role access to tables at the organization level.

Enable change tracking.

Add and update data.

You need to implement virtual tables.

Which two requirements can you meet by using virtual tables? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. Enable change tracking.

B. Assign security role access to tables at the user level.

C. Add and update data.

D. Assign security role access to tables at the organization level.

E. Audit updates to the data.

Correct Answer: BC

Explanation:

C: Virtual tables enable integrating data from external data sources by seamlessly representing that data as tables in Microsoft Dataverse, without data replication. Solutions, apps, flows, and more can use virtual tables as if they were native Dataverse tables. Virtual tables allow for full create, read, update, and delete privileges unless the data source they\\'re connecting to specifically forbids it

B: The connector permissions enforce the ability for organizational users to access and operate on the virtual table. The connection can be shared with one user or can be shared with the entire organization. This allows users to access and operate virtual tables using a shared connection. By using security roles, virtual table access can be restricted to a specific set of users within your organization. You can even specify which roles have create, read, update, or delete privileges in this way.
