QUESTION 1

What would not be considered refactoring?

A. Extracting methods

B. Reordering method parameters to improve readability

C. Changing external interfaces or APIs

D. Renaming things to be more logical

E. Extracting interfaces

Correct Answer: C

Refactoring is only about the own code, so not about changing an external interface or api.

QUESTION 2

Choose two common cross-cutting concerns in application architecture

A. Release documentation

B. Build automation

C. Security

D. Design pattern choices

E. Scalability

Correct Answer: CE

The others are either not cross-cutting or not related to architecture.

QUESTION 3

What statement best describes the product backlog?

A. It is an emergent, ordered list of what is needed to improve the product

B. It is the diary of the product owner

C. It is mainly meant as inspiration for the sprint planning

D. It is a list of all the requirements that will have to be added to the product

Correct Answer: A

It is not fixed, it is a live artifact that will grow and change as more is learnt. The product owner orders it by value.

QUESTION 4

What is the role of modeling in scrum teams?

A. Models are not used by agile teams

B. Models are maintained along with the software as it emerges

C. Models are assembly instructions for the developers

D. Modeling may be useful to increase shared understanding

Correct Answer: D

Models are in no way mandatory, however their value as increasing shared language is acknowledged.

QUESTION 5

What two things should the developers not do?

A. Work together and self manage to create value

B. Design the full architecture before starting

C. Creating a plan for the entire project

D. Create a potentially shippable functionality in the sprint

Correct Answer: BC

Architecture emerges in scrum during the adding of functionality. The plan for the rest of the project cannot be made by the developers, they should just focus on their sprint.
