**QUESTION 1**

Which two of the following are ways that Palo Alto Networks CloudDelivered Security Services (CDSS) use confidential information collected from users? (Choose two.)

Select 2 Correct Responses

- A. legal compliance
- B. attack retaliation attribution
- C. verification of entitlements
- D. verification of applicant statements

Correct Answer: AD

QUESTION 2

Which deployment method is used to integrate a firewall to be inline in an existing network but does not support additional routing or switching?

- A. virtual wire
- B. TAP mode
- C. Layer 3
- D. Layer 2

Correct Answer: A

QUESTION 3

How does Cloud Identity Engine (CIE) simplify deployment of cloudbased services to provide user authentication?

- A. It allows configuration of an authentication source once instead of for each authentication method.
- B. It expands the capability to filter and forward decrypted and non-decrypted Transport Layer Security (TLS) traffic.
- C. It ensures that a compromised master key does not compromise the configuration encryption for an entire deployment.
- D. It authenticates users via a cloud-based service and refers to the hub for mappings for group identification.

Correct Answer: D

**QUESTION 4**

Which architecture allows a Palo Alto Networks Next-Generation Firewall (NGFW) to achieve high performance with all security features enabled?

- A. single-pass parallel processing
- B. dual-pass processing
- C. multi-core processing
- D. parallel-pass single processing

Correct Answer: A

QUESTION 5

A customer has enabled the Threat Prevention subscription on their Palo Alto Networks Next-Generation Firewall.

How will the performance of the firewall be affected if the customer also enables both WildFire and User-ID?

- A. The maximum throughput performance will be reduced, but the impact will vary based on the firewall model being used.
- B. Enabling User-ID will have no additional performance impact, but enabling WildFire will reduce throughput.
- C. There will be no additional performance impact to the firewall, and throughput will remain the same, regardless of firewall model.
- D. Enabling WildFire will have no additional performance impact, but enabling User-ID will reduce throughput.

Correct Answer: C
