**QUESTION 1**

The firewall includes predefined reports, custom reports can be built for specific data and actionable tasks, or predefined and custom reports can be combined to compile information needed to monitor network security.

The firewall provides which three types of reports? (Choose three.)

- A. SNMP Reports
- B. PDF Summary Reports
- C. Netflow Reports
- D. Botnet Reports
- E. User or Group Activity Reports

Correct Answer: CDE

QUESTION 2

Which two configuration items are required when the NGFW needs to act as a decryption broker for multiple transparent bridge security chains? (Choose two.)

- A. dedicated pair of decryption forwarding interfaces required per security chain
- B. a unique Transparent Bridge Decryption Forwarding Profile to a single Decryption policy rule
- C. a unique Decryption policy rule is required per security chain
- D. a single pair of decryption forwarding interfaces

Correct Answer: BC

QUESTION 3

Which statement best describes the business value of Palo Alto Networks Zero Touch Provisioning (ZTP)?

- A. It is designed to simplify and automate the onboarding of new firewalls to the Panorama management server.
- B. When it is in place, it removes the need for an onsite firewall
- C. When the service is purchased, Palo Alto Networks sends an engineer to physically deploy the firewall to the customer environment
- D. It allows a firewall to be automatically connected to the local network wirelessly

Correct Answer: A

QUESTION 4

What are three purposes for the Eval Systems, Security Lifecycle Reviews and Prevention Posture Assessment tools? (Choose three.)

- A. when you're delivering a security strategy
- B. when client's want to see the power of the platform
- C. provide users visibility into the applications currently allowed on the network
- D. help streamline the deployment and migration of NGFWs
- E. assess the state of NGFW feature adoption

Correct Answer: BCE

QUESTION 5

Which statement applies to Palo Alto Networks Single Pass Parallel Processing (SP3)?

- A. It processes each feature in a separate single pass with additional performance impact for each enabled feature.
- B. Its processing applies only to security features and does not include any networking features.
- C. It processes all traffic in a single pass with no additional performance impact for each enabled feature.
- D. It splits the traffic and processes all security features in a single pass and all network features in a separate pass

Correct Answer: C
