QUESTION 1

If an 802.11 RF transmission reaches a receiving antenna simultaneously by direct and indirect (reflected) paths, what effect will the reflected signal have on the signal that took the direct line-of- sight path?

A. The direct signal will only be received if the reflected signal is more than 180 degrees out of phase.

B. The direct signal cannot be received if the indirect signal is less than 90 degrees out-of-phase.

C. The signals will be distorted if the indirect signal arrives simultaneously at the receiver, but 90 degrees out-of-phase.

D. If the signals are in-phase, they will combine together, cancel one another out, and create a null.

Correct Answer: C

QUESTION 2

When a client moves to a new BSS within an ESS, what steps are part of the 802.11 reassociation process? (Choose two)

A. The client station transmits a Reassociation Request frame to its current access point.

B. The current access point informs the IP gateway of the reassociation.

C. The current access point triggers the client\\'s reassociation service.

D. The new access point transmits a Reassociation Response to the client station with a status value.

E. The client and new access point create unicast encryption keys.

F. The client station transmits a deauthentication frame to the current access point.

Correct Answer: DE

QUESTION 3

What specifications should be evaluated for an antenna before it is implemented in a WLAN system? (Choose three)

- A. Spectral efficiency
- B. TPC support
- C. Impedance in Ohms
- D. Elevation Beamwidth
- E. Return Loss Rating
- F. Operating Frequencies

Correct Answer: CDF

QUESTION 4

What is the general type and purpose of the application shown in the exhibit?

× 1.6 × gov × 7 MAC Address 7 00:19:77:25:C2:50	SID or Vendor Infrastructure	1, 6 • metageek	Newto	ork Type 🔻	Security 🔻	2

/ 31 AP(s) GPS: Off	<u> </u>					Logging:	Off				

A. Laptop-based Site Survey Utility - Creating a list of necessary APs and plotting their locations on a floor plan

B. Wireless Network Management System - Managing multiple autonomous APs through the SNMP protocol

C. 802.11 Protocol Analyzer - Capturing and decoding 802.11 frames for the purpose of troubleshooting and optimization

D. Laptop-based Spectrum Analyzer - Monitoring the RF spectrum for interference sources and improper system operation

E. WLAN Discovery Tool - Locating and identifying secured and unsecured WLAN access points

F. Wireless Intrusion Protection System - Monitoring 802.11 frame exchanges for performance and security analysis and reporting

Correct Answer: E

QUESTION 5

Given: ABC Hospital is planning a Wi-Fi infrastructure upgrade where the 802.11b/g APs would be replaced with new

dual-radio HT (802.11n) APs. ABC wants to minimize the time and cost associated with performing a new site survey, so

they will be mounting all of the new APs in the same locations and with the same cable drops as the existing APs.

What is one performance drawback with this deployment method?

A. Multipath will increase, causing excessive layer-2 retransmissions. The retransmissions will cause latency for VoWiFi handsets.

B. Increased receiver sensitivity on the HT APs will cause them to continually change channels to avoid co-channel interference.

C. If the existing UTP cabling is not Category 6 or better, the total Ethernet backhaul for each AP will be limited to 100 Mbps.

D. In locations with line-of-sight to client devices and little multipath, the benefits of MIMO may be less significant than in other areas.

Correct Answer: D
