**QUESTION 1**

A customer has 30 target values that are used to evaluate the quality of an organization's facilities. At least half the target values are changed monthly by the business users.

What is the most efficient way for the developer to store, access, and maintain the target values?

- A. save the target names and values in an external file, load them into a QlikView table, and use a FOR loop to assign the values to variables
- B. manually create a variable for each value in Expression Overview and maintain them in Expression Overview
- C. create a Variables tab in the load script and use 30 LET statements to assign the values to variables
- D. embed the target values into each expression in which they are required

Correct Answer: A

QUESTION 2

Refer to the exhibit to the right.

Customers
Address
City
CompanyName
ContactName
Country
CustomerID
DivisionID
Fax
Phone
PostalCode
StateProvince

Fax
Information density: 76%

What can a developer determine from the exhibit about the values in the Fax field?

- A. The Fax field has NULL values for 24 percent of the records.

- B. The Fax field has blanks for 24 percent of the records.
- C. The Fax field has 76 percent incomplete invalid fax numbers.
- D. On average, 76 percent of the Fax field values are non-spaces.
- E. The longest Fax value is 76 percent of the assigned field length.

Correct Answer: A

QUESTION 3

A customer needs to display sales amounts for the current month and a trend of sales over the prior 12 months using as small amount of screenspace.

Which chart type should the designer use to meet the customer's needs?

- A. a Combo Chart with one expression to display the current month sales and a second expression represented as a Mini Chart to display a trend of sales over the prior 12 months
- B. a Straight Table with one expression to display the current month sales and a second Line Chart to display a trend of sales over the prior 12 months
- C. a Straight Table with one expression to display the current month sales and a second expression represented as a Mini Chart to display a trend of sales over the prior 12 months
- D. a Straight Table with one expression to display the current month sales and a second expression represented as a Linear Gauge to display a trend of sales over the prior 12 months

Correct Answer: C

QUESTION 4

How can a developer use QVD files to optimize reload performance?

- A. create an incremental load strategy that reduces the query selects against the source data
- B. decrease latency between the QlikView reload engine and the source data
- C. enable a direct interface between the database server memory and the QlikView server memory
- D. enable the binary load functionality and directly load files in binary from the hard disk into system memory

Correct Answer: A
