**QUESTION 1**

You must implement a backup infrastructure for a remote office. This office has enough data to fill a single tape each night. You can remotely schedule and control your backup server backups throughout the night. The staff at this site is not technical and will not touch the equipment. You only need to store the last five days worth of data these tapes. What solution purchase and administrative costs?

- A. Deploy a tape autoloader with enough tape slots to support a new tape for each night
- B. Deploy a set of five individual tape drives to the backup server each with a tape preloaded then rotate the tape drive you use each night.
- C. Deploy a tape library with multiple tape drives to ensure quick backup and enough tape slots to support a new tape each night.
- D. Deploy a single direct attached tape drive to the backup server and instruct onsite personnel how to swap tapes to ensure a new blank tape is available each night.

Correct Answer: A

QUESTION 2

Which statement describes archiving?

- A. Archiving is implemented for UNIX-based mail systems.
- B. Archiving provides copies of current data to be used in the event of a disaster
- C. Archiving selectively stores frequently used files and data on high performance media
