**QUESTION 1**

You have completed installing your FC SAN. When everything is powered on, numerous devices are not available. You need to verify that the devices appear within the FC fabric by accessing the appropriate FC service that provides a list of devices and their respective function.

Which server within the Fibre Channel fabric would be used to do this?

- A. Fabric Login server
- B. Name server
- C. Management server
- D. Fabric Controller

Correct Answer: B

QUESTION 2

A database administrator (DBA) is complaining of slow write performance to a storage array. The DBA would like to have access to real-time performance reporting of the storage array to correlate array performance with database performance.

Following SNIA Storage Security Best Current Practices, what should you do while limiting administrative complexity?

- A. Create a generic administrative ID with limited administrative rights to the storage array and provide it to all members of your organization\\'s DBA team for performance troubleshooting.
- B. Create a read-only view of performance graphs for the LUNs presented to database hosts and add the DBAs user ID access.
- C. Create a nested administrative sub-group that has access to all performance data and
- D. administrative settings for the LUNs presented to database hosts and add the DBAs user ID to the nested sub-group.
- E. Create a nested administrative sub-group that has access to all performance data and
- F. administrative settings for the LUNs presented to database hosts and add the DBA team\\'s user group to the nested sub-group.

Correct Answer: B

QUESTION 3

The CIO would like to segregate management device IP network traffic from server IP network traffic within the data center to limit potential security threats.

What would be used to accomplish this?

- A. IPsec
- B. Firewall
- C. VLANs
- D. PKI

Correct Answer: C

QUESTION 4

You have received an emergency call from the night shift after they attempted to merge three small SANs in the engineering department. Once completed, all devices in SANs A and B communicate with one another but SAN C could not communicate with either of the other SANs because the fabric has become segmented.

Which statement is correct?

- A. The port is isolated until a fabric rebuild occurs,
- B. The port is isolated until a fabric re-configuration occurs.
- C. The system administrator must manually correct the issue that caused segmentation (port isolation) and then start the Build Fabric (BF) process.
- D. The system administrator must manually correct the issue that caused port isolation (segmentation) and then start the Reconfiguration Fabric (RCF) process.

Correct Answer: D

QUESTION 5

A data center has an existing three tiered storage solution consisting of enterprise, nearline, and tape. Each storage tier has available expansion capacity. A new mission-critical application is being developed that will require 4TBs of extremely low latency enterprise storage. The new application will be hosted on clustered servers. Cost is not a factor.

Which solution will meet the requirements?

- A. Add sufficient SSDs to an existing nearline storage system.
- B. Add sufficient SSDs to an existing enterprise storage platform.
- C. Add sufficient SAS drives to an existing enterprise storage platform.
- D. Add sufficient SAS drives to an existing nearline storage system.

Correct Answer: B
