**QUESTION 1**

If a service consumer program needs to get data from a service that is not available, it can poll the service by periodically issuing a request message. This type of interaction can be inefficient because it can lead to unnecessary message transmissions. Which of the following statements describes a solution to this problem?

- A. By applying the Messaging Metadata pattern, the service consumer can write a request identifier in the message header. Service agents then intercept the request messages and do not forward those that contain a previously detected identifier. This practice eliminates the delivery of the duplicate messages to the service.
- B. The Event-Driven Messaging pattern can be applied to establish a messaging framework in which service consumers are automatically notified of relevant runtime service events.
- C. By applying the Atomic Service Transaction pattern, a service can be designed to invoke an alternative exception handling process when it is unavailable to receive a given message.
- D. None of these statements describe solutions that directly solve this problem.

Correct Answer: B

---

**QUESTION 2**

Two services need to exchange a business document that exists as an XML document. Each service's contract uses a different XML schema to represent the business document structure. This results in two different XML representations for the same business data. Which of the following patterns can be used to enable the exchange of the business document between these two services?

- A. Data Format Transformation
- B. Protocol Bridging
- C. Atomic Service Transaction
- D. Data Model Transformation

Correct Answer: D

---

**QUESTION 3**

The Atomic Service Transaction pattern can be applied using the WS-Coordination and WS-AtomicTransaction standards.

- A. True
- B. False

Correct Answer: A

---

**QUESTION 4**

The application of the Protocol Bridging pattern helps overcome disparity between:

- A. transport protocols
- B. messaging protocols
- C. transaction protocols
- D. policy protocols

Correct Answer: AB

---

#### QUESTION 5

Based on the publisher and subscriber roles established by the application of the Event- Driven Messaging pattern, which of the following statements are true?

- A. a service, acting as a publisher, issues event notification messages to an event management program that is responsible for broadcasting the messages
- B. a service consumer, acting as a subscriber, can selectively subscribe to specific events
- C. an intermediate event management program enters the role of subscriber when accepting event subscriptions
- D. upon receiving a message associated with an event that a service consumer subscribed to, the service consumer enters the publisher role

Correct Answer: AB
