**QUESTION 1**

When applying the Schema Centralization pattern, multiple services can form dependencies on the same centralized schema.

- A. True
- B. False

Correct Answer: A

QUESTION 2

Which of the following statements is false?

- A. The Contract Centralization pattern positions the service contract as the official entry point into the service logic.
- B. The Contract Centralization pattern can impose performance overhead and requires the use of design standards.
- C. The application of the Contract Centralization pattern enables access to underlying service resources through the use of secondary or unofficial technical contracts.
- D. The Decoupled Contract pattern supports the application of the Contract Centralization pattern.

Correct Answer: C

QUESTION 3

Legacy systems often rely upon a combination of proprietary data models, proprietary data formats, and proprietary transport protocols. For this reason the Legacy Wrapper pattern is often used together with which of the following patterns?

- A. Atomic Service Transaction
- B. Service Messaging
- C. Service Broker
- D. Messaging Metadata

Correct Answer: C

QUESTION 4

If a service consumer program needs to get data from a service that is not available, it can poll the service by periodically issuing a request message. This type of interaction can be inefficient because it can lead to unnecessary message transmissions. Which of the following statements describes a solution to this problem?

- A. By applying the Messaging Metadata pattern, the service consumer can write a request identifier in the message

header. Service agents then intercept the request messages and do not forward those that contain a previously detected identifier. This practice eliminates the delivery of the duplicate messages to the service.

B. The Event-Driven Messaging pattern can be applied to establish a messaging framework in which service consumers are automatically notified of relevant runtime service events.

C. By applying the Atomic Service Transaction pattern, a service can be designed to invoke an alternative exception handling process when it is unavailable to receive a given message.

D. None of these statements describe solutions that directly solve this problem.

Correct Answer: B

QUESTION 5

The service model most associated with the Process Abstraction and Orchestration patterns in general is:

A. entity service

B. utility service

C. wrapper service

D. None of the above.

Correct Answer: D
