### QUESTION 1

The Process Centralization pattern is a part of which compound pattern?

- A. Enterprise Service Bus
- B. Orchestration
- C. Federated Endpoint layer
- D. Official Endpoint layer

Correct Answer: B

---

### QUESTION 2

If a service consumer program needs to get data from a service that is not available, it can poll the service by periodically issuing a request message. This type of interaction can be inefficient because it can lead to unnecessary message transmissions. Which of the following statements describes a solution to this problem?

- A. By applying the Messaging Metadata pattern, the service consumer can write a request identifier in the message header. Service agents then intercept the request messages and do not forward those that contain a previously detected identifier. This practice eliminates the delivery of the duplicate messages to the service.
- B. The Event-Driven Messaging pattern can be applied to establish a messaging framework in which service consumers are automatically notified of relevant runtime service events.
- C. By applying the Atomic Service Transaction pattern, a service can be designed to invoke an alternative exception handling process when it is unavailable to receive a given message.
- D. None of these statements describe solutions that directly solve this problem.

Correct Answer: B

---

### QUESTION 3

Protocol bridging features are a common part of enterprise service bus products and can be provided through the use of adapters.

- A. True
- B. False

Correct Answer: A

---

### QUESTION 4

A service composition architecture with the following requirements needs to be created:

1.

Services will have different periods of availability.

2.

Sometimes the destination of a message cannot be determined until runtime.

3.

All the services do not support the same messaging protocol. Of the following choices, which patterns should be used to address these requirements?

- A. Event-Driven Messaging, Intermediate Routing, Atomic Service Transaction
- B. Protocol Bridging, Compensating Service Transaction, Asynchronous Queuing
- C. Intermediate Routing, Data Format Transformation, Asynchronous Queuing
- D. Protocol Bridging, Intermediate Routing, Asynchronous Queuing

Correct Answer: D

---

#### QUESTION 5

A service facade component can be used to abstract the part of a service architecture that has negative coupling potential.

- A. True
- B. False

Correct Answer: A
