QUESTION 1

You are monitoring your Internet connection, and your ISP has guaranteed512 Kbps. Historical data shows that your connection speed holds at 256 Kbps for long periods of time, but never exceeds this speed. What does this indicate?

A. the ISP has misconfigured the link.

B. the WAN router is misconfigured.

C. the NAT table is overloaded.

D. QoS is dropping low priority traffic.

Correct Answer: A

QUESTION 2

While attempting to add a device to Orion for monitoring, you find that Orion can communicate with the device for latency measurements, but is not able to pull data such as CPU load or interface traffic. What should you verify first?

A. that ICMP is allowed to and from the device

B. that the device is configured to send SNMP traps to Orion

C. that you have the correct SNMP community string for the device

D. that Orion is running the correct version of SNMP

Correct Answer: C

QUESTION 3

An Orion NPM administrator creates an alert trigger that reads: Trigger Alert when all of following apply. Average Xmit+Recv Percent Utilization is greater than 80 How should the administrator limit this alert to interfaces on nodes located in Austin?

A. create an interface custom property that represents the location of the node and include"Location is equal to Austin" as a complex trigger condition

B. create an interface custom property that represents the location of the node and include"Location is equal to Austin" as a simple trigger condition

C. create a node custom property that represents the location of the node and include"Location is equal to Austin" as a complex trigger condition

D. create a node custom property that represents the location of the node and include"Location is equal to Austin" as a simple trigger condition

Correct Answer: D

QUESTION 4

The IT planning department has asked for a report to help them understand when they need to implement IPv6. Which report would offer them the greatest amount of relevant information?

A. unique NetFlow exporters

B. DHCP server CPU utilization

C. number of subnets

D. IP address utilization trends

Correct Answer: D

QUESTION 5

Your network management system (NMS) reports memory consumption on a server to be 95%. You connect to the server and see a memory consumption of 80%. What is a possible cause for this inconsistency?

A. WMI has been misconfigured on the server.

B. The NMS is using the wrong version of SNMP to poll the server.

C. The NMS is displaying an average, whereas the server is displaying real-time data.

D. The NMS is displaying real-time data, whereas the server is displaying an average.

Correct Answer: C
