**QUESTION 1**

Which of the following would be the BEST approach to keep a single controller storage subsystem on a single fabric from being a single point of failure?

- A. Dual controllers
- B. Multi-path
- C. Dual core switches
- D. Redundant fabrics

Correct Answer: A

QUESTION 2

When setting up queue depths in the below environment parameters:

- A storage device's port queue depth setting is set to 160
- They would like to assign 4 host HBAs to each port

Which of the following depth values would be the BEST to assign to each HBA?

- A. 40
- B. 80
- C. 160+
- D. Default value

Correct Answer: A

QUESTION 3

A server with two HBAs is connected to two identical fabrics and configured as active-active, load balanced with automatic failover. Under normal conditions, traffic is moving across both fabrics equally. During a maintenance window to upgrade code on the switches, Fabric A is taken offline. This server reports all paths lost. The switch on Fabric B shows no light on the port connected to HBA B. Which of the following should be the FIRST step to troubleshoot the problem?

- A. Check HBA B on the server.
- B. Remove the server from production.
- C. Replace the cable on Fabric A.
- D. Replace the switch in Fabric B

Correct Answer: A

QUESTION 4

Which of the following technologies has the FASTEST hard drive interface?

- A. SATA
- B. FC
- C. SAS-2
- D. SCSI-3

Correct Answer: C

QUESTION 5

An Exchange Completion Time (ECT) gives a technician information about which aspects of the environment? (Select TWO)

- A. Shows potential issues that are occurring and slowing down the network
- B. Tracks the exchange of data omitting the value for 10 latency
- C. Measures the data patterns for troubleshooting connectivity issues
- D. The overall performance of the switches and the connections that are causing bandwidth issues
- E. The general overall performance and 10 latency of the network

Correct Answer: AE
