QUESTION 1

What are two core design principles to consider when building Analytics apps or dashboards? Choose 2 answers

- A. Emphasis: make sure they have space for important information, such as headlines and key charts.
- B. Clarity: make sure they are uncluttered and easy to interpret.
- C. Consistency: make sure they have a sense of familiarity to strengthen your users' ease of use.
- D. Balance: make sure they have a balance of different charts to get a more interesting design.

Correct Answer: BC

QUESTION 2

A customer wants to change the default blue color on a bar chart. What is the easiest way to change blue to another color?

- A. Use conditional formatting under the bar chart widget properties by selecting the dimension.
- B. Use conditional formatting under the bar chart widget properties by selecting the measure.
- C. Use bindings to specify a color per bar.
- D. Create a compare table formula to specify a hidden metric for coloring purposes.

Correct Answer: B

QUESTION 3

What can you do in a dataset recipe?

- A. Extract external data into Analytics
- B. Build a dashboard
- C. Combine data from different datasets
- D. Make a data chili

Correct Answer: C

QUESTION 4

Which of the following are included in the template object?

- A. ui.json
- B. app.json
- C. variables.json
- D. A,B and C
- E. A,C

Correct Answer: E

* template-info.json manages all elements of your template, including metadata information about the template, the Analytics objects that define dashboards and lenses, and the other files that are part of the template.* ui.json manages the configuration wizard that drives app creation. It defines the number of wizard pages, the order of wizard questions, and any messages you want the user to see.* variables.json contains all template variables, including text for wizard questions and specifications for the answers. Variables also define conditional questions. For example, you may want some questions to appear in the wizard only if an org contains certain data. Or you might want to add more specific questions based on the answers to more general wizard questions.* template-to- app-rules.json defines the rules the template follows. For example, you could define a rule that specifies that if an org doesn't use certain Salesforce objects, the app won't refer to them in dashboards or include them in the dataflow. Rules also define how variables are handled. For example, if the wizard asks which fields to include in filters for accounts, template-to-app-rules.json determines how that choice is reflected in dashboards.

QUESTION 5

Which of these is not a method for controlling record-level access?

- A. Profiles
- B. Sharing Rules
- C. Organization-Wide Defaults
- D. Role Hierarchy

Correct Answer: A
