QUESTION 1

What is the significance of using the spawn option with a BusinessWorks process definition Call Process activity?

A. The subprocess can bind data back to the caller when it ends and the subprocess has its own thread.

B. There will be no data bound back to the caller when the subprocess ends and the subprocess has its own thread.

C. The subprocess can bind data back to the caller when it ends and the subprocess shares the same thread as the calling process.

D. There will be no data bound back to the caller when the subprocess ends and the subprocess shares the same thread as the calling process.

Correct Answer: B

QUESTION 2

Which two statements are true when considering the schema or metadata of event driven BusinessWorks processes? (Choose two.)

A. External business events generated by adapters utilize statically defined schema.

B. Developers are free to design the schema of any internal events, but not external events.

C. Once an event occurs, there is no way to modify the schema of the event data. The developer must utilize it in its original form.

D. Business events can be mapped into common business objects to minimize the number of schemas that business processes must deal with.

Correct Answer: AD

QUESTION 3

Which two BusinessWorks functions return a representation of the present date and time? (Choose two.)
