**QUESTION 1**

You are planning a large virtualization project and are concerned that a physical server will cause a prolonged outage until help desk calls are received and all VMs restarted. How can the restart of VMs after a failure be automated?

- A. Fault Tolerance (FT)
- B. High Availability (HA)
- C. Data Protection
- D. Distributed Resource Scheduler (DRS)

Correct Answer: B

QUESTION 2

You are a VMware architect designing a solution for several applications that are not cluster-aware, yet still must be constantly available. If these applications should stop, the manufacturing processes will need to be restarted, losing several hours of production. Which technology would provide a valid solution?

- A. Virtual Machine File System (VMFS)
- B. Fault Tolerance (FT)
- C. vCloud Director
- D. vSphere Data Protection (vDP)

Correct Answer: B

QUESTION 3

You are the VMware Administrator for the local city government. When you arrive at your desk, you find that there are several alarms referring to an outage caused by an overnight driver update. When you ask your colleagues about the driver update, no one seems to know anything about it. Which solution will help in determining the problem?

- A. A PowerShell script to gather hardware driver versioning information
- B. vCenter Configuration Manager (vCCM)
- C. The vCenter Virtual Appliance
- D. vProtect

Correct Answer: B

QUESTION 4

What is a scalability challenge that vSphere can address?

- A. Virtual machines require less administration
- B. Servers can be overclocked to provide extra processing speed
- C. CPUs and Memory can be added to servers without an outage
- D. Virtual networks have more capacity than physical networks

Correct Answer: C

QUESTION 5

What is a Management challenge that vSphere can address?

- A. Change management processes can be eliminated
- B. CMDBs are automatically updated
- C. IT processes can be automatically updated
- D. Legacy applications can be run on new hardware

Correct Answer: C
