QUESTION 1

In a multitier website consisting of a web front end, a processing midtier, and a database backend, what will happen to the upstream components if the database tier fails?

1.

 The upstream components are unaffected by the database tier.

2.

 The upstream components will be unavailable.

A design choice must be:

A. Justified

B. As cost-effective as possible

C. Specified in a requirement

Correct Answer: B

QUESTION 2

Network vMotion requires _____.

A. network I/O control

B. distributed switches

C. a Vmkernal port marked as Network vMotion

Correct Answer: B

QUESTION 3

You are designing a VMware HA platform based on vSphere converged network hardware and softwarebased iSCSI storage. Which of the following is true?

A. vSphere 5 can provide protection for workloads in this design, using datastore heartbeats and management networks.

B. vSphere 5 datastore heartbeats may not provide additional protection in this design if a physical card containing the management and storage networks fails.

Correct Answer: B

QUESTION 4

You have been asked to design a system with the following VMware functionality enabled:

R001: VMware HA must be functional.

R002: VMware SRM can be used between two sites for DR processes. R003: You must be able to see all hosts from a single pane of glass.

From these requirements:

A. A vSphere 5.0 VCSA can provide an acceptable solution.

B. A vSphere 5.0 Windows-based vCenter can provide an acceptable solution.

C. The requirements cannot be met.

Correct Answer: B

QUESTION 5

What practice should not be considered when using IP-based storage?

A. Using an isolated network for storage

B. Using jumbo frames

C. Placing the storage network on the physical switch as the management network

D. Using a 10GbE network

Correct Answer: C
