QUESTION 1

An administrator is cloning a vSphere 5 virtual machine. The resulting clone will be placed in a datastore cluster. The virtual machine requires high availability on high storage performance. Which option can be selected during the cloning process to meet these requirements?

A. Change the format of the virtual disks to Flat

B. Apply a VM Storage Profile

C. Select Disable Storage DRS for this virtual machine

D. Do not select a datastore cluster, manually select an appropriate datastore

Correct Answer: B

QUESTION 2

An administrator is installing a Windows Server 2008 operating system into a virtual machine on an ESXi 5.x host. What are two valid SCSI adaptors for this installation? (Choose two.)

A. Paravirtual SCSI

B. LSI Logic SAS

C. BusLogic SAS

D. Broadcom SAS

Correct Answer: AB

QUESTION 3

An administrator is creating a new virtual machine using the New Virtual Machine wizard in custom mode on an ESXi 5.x host with two quad-core CPUs. What would limit the maximum number of virtual sockets for the virtual machine to 8? (Choose three.)

A. Windows 2008 32-bit is configured as the guest operating system.

B. Virtual machine hardware version 8 is configured for the VM.

C. Hyperthreading is disabled on the ESXi host.

D. The ESXi host is configured with a Standard license.

E. The number of cores per virtual socket is set to 4.
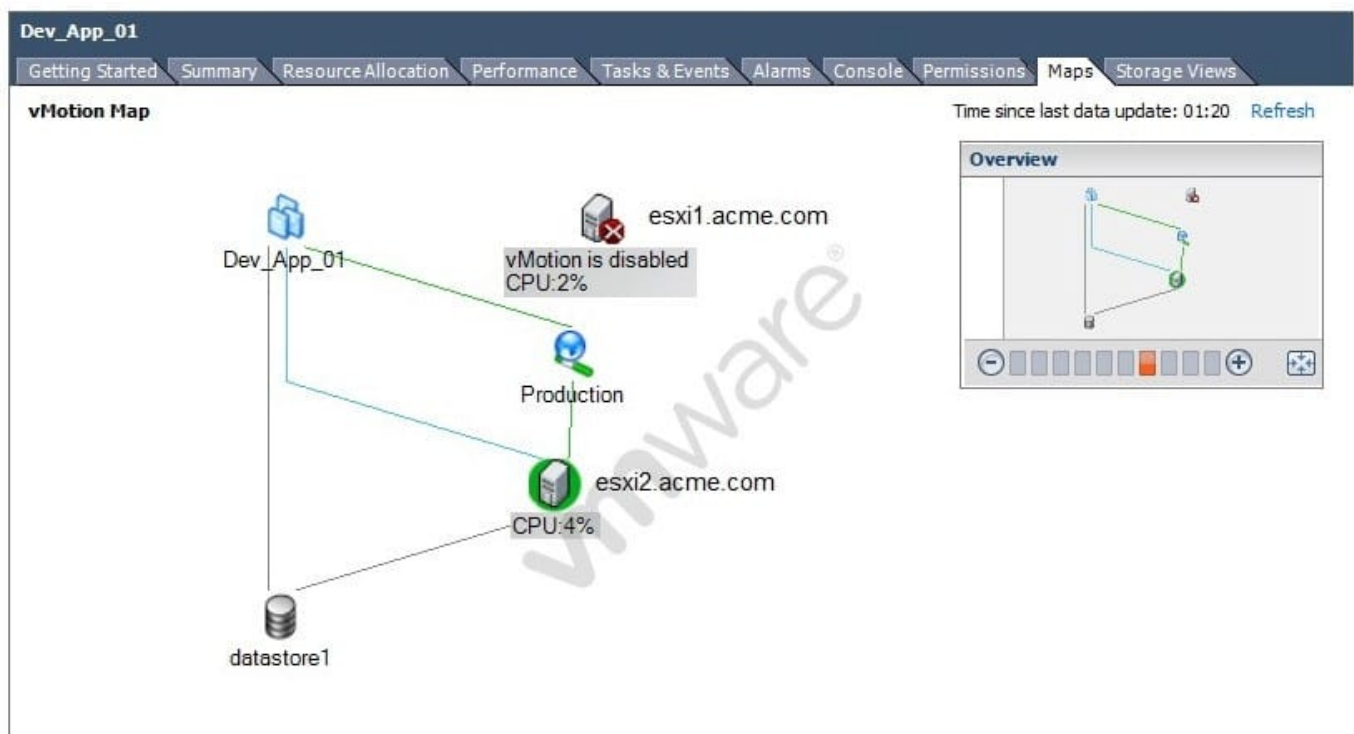

Correct Answer: CDE

QUESTION 4

When would an administrator configure the Explicit Failover option for a portgroup created on a virtual switch with multiple uplinks?

A. To manually configure load balancing for the portgroup

B. To share uplinks between vSwitches

C. When configuring iSCSI Software Initiator multipathing

D. If the physical switch does not support etherchannel or 802.3ad

Correct Answer: C

QUESTION 5

Click the Exhibit button. An administrator is configuring vMotion in their environment. As part of the implementation, an administrator is examining resource mapping for virtual machines. What is a likely cause of the error shown in the exhibit?

A. vMotion has been disabled because the are no other hosts in the cluster with vMotion enabled.

B. vMotion has not been enabled on the Production port group.

C. The administrator has not created a Managent network.

D. vMotion has not been enabled on a VMkernel port group.

Correct Answer: D
