**QUESTION 1**

During peak operating hours, an administrator finds that a business-critical application running in a virtual machine is not performing as well as during normal hours. Which memory management method can be used to guarantee that the application performs well at all times?

- A. Set a reservation equal to the average memory utilization of the virtual machine running the application.
- B. Set the share level to high for the virtual machine running the application and set the share level for all other virtual machines to low.
- C. Check the Reserve all guest memory checkbox.
- D. Set a reservation equal to the installed memory of the ESXi host running the application.

Correct Answer: C

QUESTION 2

An administrator is building a new vSphere Standard Switch with two active uplinks. The physical switch ports for these uplinks are placed in an etherchannel.

Which load balancing policy should the administrator use to support the etherchannel configuration?

- A. Route based on IP hash
- B. Route based on the originating virtual port
- C. Route based on source MAC hash
- D. Route based on physical NIC load

Correct Answer: A

QUESTION 3

A server administrator reports that a virtual machine has displayed the following message twice in the past 12 months:
No boot device found

Which virtual machine boot option should the administrator configure to resolve this issue?

- A. Failed Boot Recovery
- B. Force BIOS Setup
- C. Boot Delay
- D. Network Boot Retry

Correct Answer: A

QUESTION 4

A vSphere administrator needs to enable Fault Tolerance on a virtual machine. When performing a Storage vMotion migration, which setting should the vSphere administrator change in the virtual machine's disk format to ensure it meets Fault Tolerance requirements?

- A. Thick Provision Eager Zeroed
- B. Thick Provision Lazy Zeroed
- C. Thin Provisioned
- D. Thin Provision Eager Zeroed

Correct Answer: A

QUESTION 5

An administrator would like to have vCenter take action any time a virtual machine is using over 90% of its available resources for five minutes or longer. Which three actions can be taken by vCenter Server in response to the trigger without running a script? (Choose three.)

- A. Power on a VM
- B. Reboot Guest on VM
- C. Increase Virtual Machine Memory
- D. Migrate a VM
- E. Increase Virtual Machine CPU Shares

Correct Answer: ABD

Power on a VM, reboot guest and Migrate a VM will be the actions taken by vCenter Server in response to a trigger without needing a script.
