**QUESTION 1**

What does it mean when a cluster node is in the REMOTE\_BUILD state?

- A. The in-memory cluster configuration is being built by copying the in-memory configuration from another running cluster node.
- B. The node is building the in-memory cluster configuration from the primary main.cf file on a remote node.
- C. The in-memory configuration on the node is being updated to reflect configuration changes being made on a remote node.
- D. It is the last node to join the cluster and must wait to build the in-memory configuration until all other nodes have their in-memory configuration.

Correct Answer: C

---

**QUESTION 2**

An administrator is attempting to start Veritas Cluster Server (VCS) on a node and receives the following message:

```
VCS:10622 local configuration missing
```

Which two actions can the administrator perform to resolve this problem? (Choose two.)

- A. run hacf -createconfig on the affected node
- B. start the VCS engine, HAD, on another system that has a valid configuration file
- C. re-run the hastart command with the -force option
- D. copy a valid configuration file to the local system and restart VCS with the -force option
- E. check the system heartbeat connections

Correct Answer: BD

---

**QUESTION 3**

An administrator assigns the coordinator disks to a cluster, then starts I/O fencing; but the fencing driver displays the following error message:

```
000068 09:37:33 2bdd5815 0 ... 3066 0 VXFEN WARNING V-11-1-56
Coordinator disk has key with cluster id 47813
which does not match local cluster id 57019
```

Which action should the administrator perform to clear the error message and configure the I/O fencing to the local

cluster?

- A. use the command vxfsnwap to replace the coordinator disk group
- B. use the command vxfsnadm to remove the key
- C. use the command vxfsnconfig to configure the vxfsn driver
- D. use the command vxfsnclearpre to clear the key

Correct Answer: B

---

#### QUESTION 4

Which High Availability agent manages route table entries of overlay IP for failover across subnets in an Amazon Web Services (AWS) cloud environment?

- A. IPMultiNIC agent
- B. IP agent
- C. AWSRoute53 agent
- D. AWSIP agent

Correct Answer: D

---

#### QUESTION 5

Which action should an administrator take to avoid single points of failure when making an application highly available?

- A. utilize cross-over network cables for heartbeats with multi-node clusters to withstand power outages
- B. place application binaries on shared storage to reduce the chance of corruption
- C. use host IP address for configuring and accessing application from various clients
- D. ensure multiple paths for data access so the application can continue if one path goes down

Correct Answer: D
