**QUESTION 1**

A storage unit group is configured that has disk and then tape listed. During a backup session, jobs start retrying and then running on the tape device only. What is a likely cause of the change?

- A. The disk storage unit is full.
- B. The tape device was listed first in the storage unit group.
- C. The tape device was listed second in the storage unit group.
- D. The disk storage unit is staging to tape.

Correct Answer: B

---

**QUESTION 2**

Which utility should an administrator use to verify library device functionality?

- A. nbdevconfig
- B. robtest
- C. bpmedia
- D. tpconfig

Correct Answer: C

---

**QUESTION 3**

The administrator of a large bank needs to preserve financial information for an extended period of time. The bank's NetBackup 7.6.1 catalog is now over 800GB in size, causing the catalog backups to contend for resources with production system backups.

How can the administrator shorten the time needed to back up the catalog?

- A. use the NetBackup 7.6.1 Agent for Symantec Enterprise Vault to perform an online archive of the catalog
- B. create a catalog archive policy and execute it from the command line using the bpcatarc command
- C. use the NetBackup 7.6.1 client-side deduplication feature to shorten the time it takes to perform a catalog backup
- D. back up the catalog by scheduling an online Sybase database backup policy to allow the backup to run without contending for resources

Correct Answer: B

---

**QUESTION 4**

A Windows policy protects over 100 servers using the directive ALL\_LOCAL\_DRIVES. The backup window for this policy is a two-hour window that is unused by any other policy. When the jobs run, the overall performance of the disk storage unit is degraded.

Which setting should the administrator modify to reduce the number of concurrent streams writing to the disk storage unit to 10 during the backup window?

- A. enable the "Maximum Data streams" property
- B. enable the "Limit Jobs per policy" attribute
- C. set the "Maximum jobs per client" host property to 10
- D. enable multiplexing for the storage unit and set the value to 10

Correct Answer: B

---

**QUESTION 5**

Which two prerequisites must an administrator perform to enable restoration of individual objects and attributes in Active Directory? (Select two.)

- A. install the NetBackup File System daemon (nbfscd) on the client
- B. choose the "Enable granular recovery" option in the policy
- C. choose the "Use Accelerator" option in the policy
- D. choose Active Directory policy type
- E. enable the Network File System (NFS) on the client

Correct Answer: BE
