**QUESTION 1**

Which two performance scenarios benefit from seeding the MSDP pool? (Select two.)

- A. new client backups over WAN
- B. new application backups over SAN
- C. new VADP VMWare backups using media server as the backup host
- D. new replication to a new DR site
- E. new clients with large file systems containing small files

Correct Answer: AD

QUESTION 2

An administrator took media server mediaA offline for maintenance and set up a new media server mediaB with access to the previously backed up data. When restores are performed for data that was backed up by mediaA, the restores fail.

Which setting must the administrator modify to allow successful restores?

- A. from the master server, run bpimage to change the name of the media server from mediaA to mediaB
- B. set Enable unrestricted media sharing for all media servers in the master server host properties in the Media section
- C. in the BAR console, change the Server to use for backup and restores setting to mediaB
- D. verify both media servers are set up in the master server host properties in the Restore Failover section

Correct Answer: D

QUESTION 3

A NetBackup environment with a single tape storage unit is experiencing performance issues when running full backups of a Windows file server with over a million small files. Backups for all other clients on the same network are performing adequately.

What should the administrator modify to improve performance for the client?

- A. enable Windows Change Journal
- B. modify data buffer settings for the data path
- C. enable the Use Accelerator policy attribute
- D. use Flashbackup-Windows policy type

Correct Answer: D

QUESTION 4

An administrator needs to decrease the total amount of time required to back up a UNIX file server, but requires a full backup every night for recovery purposes.

How should the administrator proceed?

- A. use policy compression
- B. use the NetBackup Accelerator
- C. use change journal
- D. use client-side deduplication

Correct Answer: B

QUESTION 5

What is the purpose of the Logon and Password settings in the Disaster Recovery tab of a NetBackup catalog backup policy?

- A. to specify credentials required to access a network share
- B. to encrypt the NetBackup catalog backup data
- C. to require credentials to perform a catalog recovery
- D. to encrypt the disaster recovery file

Correct Answer: A
