QUESTION 1

Storage life-cycle policy SLP1 is used to perform a backup and duplication. The backup is always a small 100MB backup. The master server host properties for SLP Parameters are set to the default values.

How can the administrator ensure the duplications run as soon as possible after the backup completes?

- A. reduce the Job submission Interval setting to 0
- B. reduce the Minimum size per duplication job setting to 50MB
- C. right-click SLP1 and select Manual Relocation to Final Destination
- D. increase the priority for secondary operations in the SLP

Correct Answer: D

QUESTION 2

Refer to the exhibit.

Two media servers, sharing a library with 10 tape drives, exist in the NetBackup 8.0 environment displayed in the exhibit. Both weekly full and daily differential incremental backups need to run for the clients and each schedule has a different retention period. Because of network topology, some clients back up to Media Server 1 and some back up to Media Server 2. The environment suffers from multiple status 96 failures during the backup window.

How can the administrator minimize the number of failures?

- A. increase the Media unmount delay
- B. configure media multiplexing
- C. enable backups to span tape media
- D. enable media sharing

Correct Answer: D

QUESTION 3

An administrator is preparing to perform disaster recovery for many clients whose backups are stored on multiplexed tapes.

Which host property should the administrator modify, prior to the restores, to ensure the best recovery time?

- A. set Enable unrestricted media sharing for all media servers
- B. increase Restore retries
- C. increase Delay on multiplexed restores
- D. add the client IP addresses to Resilient Network

Correct Answer: D

QUESTION 4

An administrator received previously used media. The administrator inserted the media into the library, ran a inventory, updated the volume configuration, and initiated a backup. The backup ran and froze every tape that had been recently added.

Which NetBackup configuration must the administrator change to prevent this scenario from recurring?

- A. assign the media to a volume pool
- B. allow media overwrite
- C. change the barcode tag
- D. change the media ID generation rule

Correct Answer: B

QUESTION 5

Which parameter in NetBackup Management > Host Properties must be modified to change the logging level to 5 for client1.domain?

- A. Master Servers > [master_server_name] > Logging > Global logging level
- B. Clients > [client_name] > Logging > Global logging level
- C. Master Servers > [master_server_name] > Logging > Enable robust logging
- D. Clients > [client_name] > Logging > Enable robust logging

Correct Answer: B
