**QUESTION 1**

An MSDP media server is experiencing performance issues when running multiple deduplication backup jobs concurrently over 10 GbE. When switched to AdvancedDisk on the same media server, the backups perform well.

Which step can be utilized to mitigate the performance issues?

- A. increase the "Maximum concurrent jobs" for the MSDP storage unit
- B. increase the size of the MSDP disk pool on the storage server
- C. add load balancing media servers for the storage server
- D. increase the "Job priority" on the MSDP backup policy

Correct Answer: C

QUESTION 2

An administrator has a backup for client Linux1 using the LinuxClients policy complete successfully. Even though the policy Backup Selections are NOT modified, the backup job fails the next day with the following status code:

Error 71: none of the files in the file list exist.

What is a possible reason the job failed?

- A. The "\\Enable granular recovery" option was unset.
- B. The client was added to another backup policy.
- C. The file systems have been unmounted on the client.
- D. The client was temporarily shut down.

Correct Answer: C

QUESTION 3

Which two NetBackup features are available to protect the MSDP catalog? (Choose two.)

- A. NetBackup catalog backups
- B. MSDP catalog policy
- C. Optimized Catalog Duplication
- D. MSDP shadow copies
- E. Checkpoints

Correct Answer: AD
