QUESTION 1

Which action must an administrator take to properly restore System State on a live Windows web server?

- A. Restore System State in Safe mode
- B. Restore System State in Directory Services Restore mode
- C. Restore System State and reboot the server
- D. Reboot the server before the restore of System State
- E. restore System State with the option to Mark this server as the primary arbitrator

Correct Answer: C

QUESTION 2

An administrator is performing a complete online recovery of a system using a full backup followed by a series of incremental backups.

How many backup sets will need to be accessed by the Backup Exec server to complete the restore from the last incremental backup?

- A. 1
- B. 2
- C. 5
- D. 6

Correct Answer: C

QUESTION 3

An administrator is using Symantec Backup Exec to back up to an LTO tape device using default settings. Backups are running slower than expected.

Which option may improve backup performance?

- A. Use deduplication
- B. Enable optimized duplication
- C. Look for updates for the device and the controller
- D. Change device concurrency settings

Correct Answer: C

QUESTION 4

An administrator targets a backup to a disk storage device, but the backup goes into a queued state due to insufficient disk space.

Which action should the administrator take to ensure the next backup completes successfully?

- A. split the backup into more than one backup job
- B. include only as much data as can fit on the disk storage device
- C. target the backup to a disk storage pool that has more than one device in the pool with sufficient space
- D. recreate the backup job

Correct Answer: D

QUESTION 5

Where can an administrator monitor an active catalog job?

- A. Backup and Restore > Active jobs
- B. Dashboard > Storage Status
- C. Reports > Media Jobs
- D. Storage > Details > Jobs

Correct Answer: A
