**QUESTION 1**

A backup administrator is deploying a Veeam ONE environment. They have chosen to use separate servers from their Veeam Backup and Replication environment. What benefit will they receive if they install the Veeam ONE Agent onto their backup server?

- A. Track whether VMs and agents are properly protected and following the 3-2-1 rule
- B. Collect Veeam Backup and Replication logs and execute remediation actions
- C. Collect virtual environment configuration from Veeam Backup and Replication
- D. Analyze Veeam Backup and Replication log data and retrieve signature updates

Correct Answer: C

QUESTION 2

A Veeam backup administrator, protecting all VMs in a VMware environment with backups and replicas, has been requested to run a multi-server application in an On-Demand Sandbox. The sandbox needs to stay powered on, uninterrupted, for 30 days while daily backups and replicas continue to run. How can this be done?

- A. Create an application group and leverage regular replica restore points as the source for the application group
- B. Create a (secondary) replication job for the required VMs that are not scheduled to run; create a SureBackup job and use these replicas as the source
- C. Create a (secondary) replication job for the required VMs that are not scheduled to run; make an application group and use these replicas as the source
- D. Create an application group and leverage regular backup restore points as the source for the application group

Correct Answer: D

QUESTION 3

A NAS backup job has been configured within Veeam Backup and Replication, and is completing successfully, but restore operations have been failing for the last few days. What is causing the failure?

- A. The backup repository is sealed
- B. The server was added by using an IQN alias which is unable to be resolved
- C. The credentials added to the share are not allowed read-write access to the share, directories or files
- D. The cache repository assigned for this file share is unavailable for restore operations

Correct Answer: C

**QUESTION 4**

A company has outgrown their current data center and plans to use the second data center as the new primary and needs to migrate their workloads. They are running VMware in both data centers. Which steps would allow this migration to occur without any data loss?

A. 1. Replication job

2.

Failover plan

3.

Permanent failover

B. 1. Backup job

2.

Instant VM Recovery

3.

Finalize the Instant VM Recovery

C. 1. Replication job

2.

Failback

3.

Commit failback

D. 1. Replication job

2.

Planned failover

3.

Permanent failover

Correct Answer: A

QUESTION 5

When you back up regular or standalone VMs in vCloud Director, which of the following is captured and stored in Veeam's Backup and Replication backup file? (Choose three.)

A. vApp metadata

- B. VM disk content
- C. Raw device mapping
- D. In-guest iSCSI disk
- E. VM metadata
- F. Linked clone VM's prior to vCenter 6.5

Correct Answer: ABE
