**QUESTION 1**

Veeam Extract utility can be used to recover VMs from a full backup file (VBK). The extract utility does not require any interaction with Veeam Backup and Replication and can be used as an independent tool on Linux and Microsoft Windows machines.

Where is Veeam Extract utility located?

- A. On the Veeam website in the Free tools section and in the Veeam Backup and Replication ISO file
- B. %PROGRAMDATA%\Veeam folder
- C. %PROGRAMFILES%\Veeam\Backup and Replication\Backup folder
- D. Where is Veeam Extract utility located

Correct Answer: C

QUESTION 2

Veeam Explorer for Microsoft SQL Server offers which of the following capabilities? (Select 3 options)

- A. Restoring a database to the original server or different server
- B. Restoring a SQL table to the original server or different server
- C. Exporting a database to a local folder or network drive
- D. Sending SQL tables as attachments via email

Correct Answer: ABC

QUESTION 3

What is the advantage to using the Veeam Advanced Data Fetcher during a backup job?

- A. Double I/O performance compared to the VMware VDDK
- B. Double deduplication performance compared to the VMware VDDK
- C. Fewer blocks of data have to be read during the backup job
- D. Less impact on the VM during the snapshot consolidation

Correct Answer: A

QUESTION 4

If the deduplication setting are changed for an existing job, when will the new setting be applied?

- A. At the next run of the job
- B. If any kind of full backup is created
- C. If a new active full backup is created
- D. Only when you rescan the repository that stores the backup files

Correct Answer: C

https://helpcenter.veeam.com/archive/backup/95/vsphere/compression_deduplication.html To apply new deduplication settings in backup jobs, you must create an active full backup after you change deduplication settings. Veeam Backup and Replication will use the new block size for the active full backup and subsequent backup files in the backup chain.

QUESTION 5

Which of the following are among the requirements for an off-host backup proxy server? (Choose four.)

- A. The Hyper-V Role must be installed
- B. The hardware VSS provider must be configured
- C. Veeam Backup from Storage Snapshot must be enabled
- D. The proxy server must access the shared storage where the VM's reside
- E. The version of the Hyper-V host and the off-host backup proxy must match
- F. Hyper-V must be Windows 2012 or Windows 2012 R2

Correct Answer: ABDF
