-  **800,000+** Satisfied Customers

**QUESTION 1**

There are multiple property files which control the behavior of the FFDC filter. All of the following are FFDC property files EXCEPT:

- A. ffdcStart.properties - used while the server is starting
- B. ffdcRun.properties - used after the server is ready
- C. ffdcException.properties - used whenever an exception occurs
- D. ffdcStop.properties - used while the server is in the process of stopping

Correct Answer: C

---

**QUESTION 2**

When using the administrative console to configure logging on a particular server, the Diagnostic Trace Service can be configured to write messaging to log files in one of three formats. Which of the following are the supported formats?

- A. Basic, CBE, JRas
- B. Basic, Advanced
- C. Basic, Intermediate, Advanced
- D. Basic, Advanced, Lo Analyzer

Correct Answer: D

---

**QUESTION 3**

A system administrator has deployed a horizontally and vertically scaled clustered application across a 6-NODE wEBsPHERE Application Server cluster. Each node contains two cluster members. The system administrator is looking for the most scalable HTTP Session persistence mechanism for this environment.

Which of the following HTTP Session persistence strategies would BEST fit these requirements?

- A. Memory-to-Memory Replication in a pure peer-to-peer topology configuration
- B. Database Session persistence
- C. Local Sessions
- D. Local Session with overflow

Correct Answer: B

---

**QUESTION 4**

While setting up global security for a WebSphere environment, system administrators need to be assigned various accesses. In order to configure SSL (Security Socket Layer) through the administrative console, which of the following administrative roles would be required?

- A. Monitor
- B. Security
- C. Configurator
- D. Operator

Correct Answer: C

---

**QUESTION 5**

A system administrator needs to gather performance data for several databases that are accessed by the applications on a particular server. The system administrator has decided to use

the Tivoli Performance Viewer to monitor each application's database access.

Which of the following performance modules would provide the required performance data?

- A. JDBC Connection Pools
- B. Thread Pools
- C. System Data
- D. Transaction Manager

Correct Answer: A

---

**QUESTION 6**

A customer is using the WebSphere V6 Default messaging provider as the messaging service. The customer has the following configuration. Cell C1 has Bus A and B, whereas Cell C2 has Bus

- A. All of the following are supported optional EXCEPT.
- B. Configuring a link between Bus A and Bus B.
- C. Configuring WebSphere MQ as a Foreign bus.

D. Configuring a link between Bus b AND Bus C.

E. Running a JMS Client on Bus A that gets messages from a destination on Bus C.

Correct Answer: D

---

### QUESTION 7

A system administrator is developing an application to a 2-node cluster. One of the nodes is a powerful AIX-based machine and the other is a smaller Windows-based machine with less processing capability.

How would the cluster BEST be configured to ensure more work gets routed to the more powerful server?

A. Use the Random algorithm and assign a smaller weight to the Windows box.

B. Use the First-Come-First-Served algorithm

C. Use the Round Robin and assign a larger weight to the AIX machine

D. Use the Least Recently Used algorithm with weights.

Correct Answer: C

---

### QUESTION 8

A system administrator has to determine the root cause of and decides to enable tracing application server. How can the system administrator accomplish this task?

A. Inside the administrative console, click Troubleshooting -> Logs and Trace and Select the Runtime tab.

B. Inside the administrative console, click Troubleshooting -> Logs and Trace ->server -> Diagnostic Trace and select the Runtime tab.

C. Edit the tracLog properties file and restart the application server.

D. This is not possible. The trace configuration of a running application server cannot be changed.

Correct Answer: B

---

### QUESTION 9

A system administrator was troubleshooting a problem after configuring the environment for the remote plug-in (`http://webserver-hostname/snoop` does not work). The system administrator could verify that `http://app-server-hostname:9080/snoop` and `http://webserver-hostname` are working properly. Assuming that the system administrator used default values during the installation, which log file will give more information about the problem?

- A. error.log under HTTP Server logs directory
- B. http\_plugin.log under PLUGIN logs directory
- C. SystemOut.log under PROFILE logs directory
- D. plugin-cf.xml under PLUGIN logs directory

Correct Answer: D

---

#### QUESTION 10

Which of the following are services implemented by the WebSphere Application Server?

- A. Session management, Naming, Messaging engine, and the user registry
- B. Security, Messaging engine, Naming, HTTP Plug-in
- C. The user registry, Transaction service, Naming, and HTTP Plug-in
- D. Security, Naming, Messaging engine, and Dynamic Cache

Correct Answer: D

---

#### QUESTION 11

A customer called a WebSphere support analyst and asked about J2EE extensions. The analyst said that these extensions are included with Programming Model Extension (PME) which is part of WebSphere Application Server V6. The analyst also mentioned of the included extensions, but made a mistake on one of the extensions. All of the following are correct EXCEPT:

- A. Asynchronous beans offer performance enhancements for resource-intensive tasks by enabling single tasks to run as multiple tasks.
- B. Startup beans allow the automatic execution of business logic when the node agent starts or stops.
- C. Internationalization service is a WebSphere extension that allows one to automatically recognize the time zone and locale information of a calling client.
- D. Scheduler service is a WebSphere programming extension responsible for starting actions at specific times or intervals.

Correct Answer: B

---

#### QUESTION 12

A system administrator is making sure that the SSL communications between the plug-in and the application server are as secure as possible. While configuring SSL for the plug-in what steps should be taken to ensure the BEST possible security?

- A. Replace the private key
- B. Replace the plugin-key kdb file
- C. Remove the public key
- D. Remove the DummyKeyring kdb file

Correct Answer: B
