QUESTION 6

Which type of report in IBM Cognos BI is most likely authored by a financial analyst?

- A. Managed report
- B. Transactional report
- C. Statement style report
- D. Portfolio report

Correct Answer: C

Explanation

Explanation/Reference:

Explanation:

The second style of report is a transactional and operational report style. Transactional and operational reports provide the capability to report off of an operational database, to provide a critical point in time picture of performance or KPI or performance indicators based on that operational database. Typically, the users or the consumers of this type of report are operational and line managers who need to have an up to the minute view on that operational database. The other consumers of this report would be senior managers. The author of this report would be a professional author, again someone likely sitting within the IT department.

Where as slide 18 is talking about Statement type of reports and financial analysts as typical authors of these reports:

The third style of report is a statement style report. A statement style report is a financial report. The reason that we call it a statement style report is because this particular report from a Cognos perspective doesn't necessarily have any financial intelligence. So it doesn't necessarily understand what a debit or a credit is. But from every other aspect, it is very much a financial report. It details financial data, expenses, assets, liabilities. It's all generated using powerful cross tab capabilities and really gives business managers and senior managers visibility into the financial health across their business, their business unit or their particular product line. Typically the author of this is somebody who sits within the line of business. Some of the titles for example are business or financial analysts

QUESTION 7

The analysis capability of IBM Cognos BI is geared toward helping organizations answer which key question?

- A. How are we doing?
- B. What should we be doing?
- C. What are our competitors doing?
- D. Why is our business on or off track?

Correct Answer: D

Explanation:

Prospecting Business Intelligence slide 34:

Objection Handling

Objections	Response
We don't have any budget or the authority to make this decision	At times like this, we want to invest in your relationship to reduce your risk and to creating lasting value. We would be delighted to explore the challenges you articulated and determine at intervals whether it is worth proceeding based upon the type of ROI that can make it worth your while to create sponsorship for funding. Nevertheless, we remain committed to our investment in your education if you will make the time.
We have many reporting systems and tools already	We find that most of our customers use information that comes from multiple data sources. IBM Cognos was designed to take information from multiple applications (right down to spreadsheets), pull together in a single data platform providing the breadth of intelligence for a 360 degree customer view. Is there any reason you can't share some insight into your current solution – as education for me and to potentially identify gaps that my team can use to deliver value in the future.
Why buy a single product vs. a best-of-breed?	IBM Cognos is the best of both worlds. We allow organizations to select the appropriate role(s) that matches their user behaviors ensuring they can expand these capabilities as needed on a fully integrated platform.
My people are not very technical; they need a usable solution to deliver information fast	IBM Cognos solution is designed with the business user in mind. The user interface and drill-down capabilities are designed to give business users the information they need; report detailed data, analysis (without the intervention from IT) freeing up technical resources and empowers business users with the knowledge to make the right decisions.
IT doesn't pay attention to my needs for reporting	The IBM Cognos industry and functional packages are tailored to the specific needs of business users, requiring little or no IT intervention. The self-service capabilities ensure that your inquiries are handled within the package without relying on IT.

QUESTION 12

Which feature of IBM Cognos BI is designed to meet the specific demands of business analysts?

- A. Data exploration for multiple dimensions and hierarchies
- B. Simplified ad hoc reporting
- C. Portal integration
- D. Active Report

Correct Answer: A

Explanation

Explanation/Reference:

Explanation:

IBM Cognos Analysis Foundational Knowledge slide 14:

14/15. Mark: Now let's see where analytical reporting might not be enough for some people. Now you have to think about the type of role that person plays for their organization. If they are in more of an analysis type of role, they're likely to find analytic reporting too constraining for them. They're probably called a business analyst or they might be a business user or manager who performs that role for their group. They're typically comfortable with navigating through data and need more freedom to explore the information in the way that they want without preset paths or prompts during them... They typically want to

see performance across time periods, and want to find out why performance is improving or declining across multiple dimensions, like product geography, et cetera.
