**QUESTION 1**

According to best practices, what are the three recommended methods for load balancing cache servers on a NetScaler device? (Choose three.)

- A. URL hash
- B. Round robin
- C. Domain hash
- D. Least connections
- E. Destination IP hash

Correct Answer: ACE

QUESTION 2

Scenario: A network administrator needs to configure VLANs on a NetScaler to support multiple networks. The NetScaler is connected through interface 1/1 to a switch port where VLAN10 is configured. This NetScaler is also connected through interface 1/2 to a switch port that is configured for VLAN20.

Given this scenario, which two steps does the administrator need to take to configure the NetScaler for VLAN10? (Choose two.)

- A. add vlan 10
- B. set vlan 10 -ifnum 1/1
- C. bind vlan 10 -ifnum 1/2
- D. bind vlan 10 -ifnum 1/1
- E. bind vlan 10 -ifnum 1/1 -tagged

Correct Answer: AD

QUESTION 3

Scenario: An administrator wants to change the NSIP in the current NetScaler deployment. However, when the administrator tries to change the IP in the GUI, the IP is shown as grayed out and cannot be changed. The administrator then tries to add a new NSIP but finds that there is no option in the GUI to add a new NSIP.

Which command can the administrator run from the command line to change the NSIP on the NetScaler?

- A. set nsip
- B. add nsip
- C. config ns

D. ns config

Correct Answer: C

QUESTION 4

An administrator wants to configure a TCP service so that traffic can reach the associated server when the monitor assigned to the service is failing. Which attribute of the TCP service must the administrator configure to allow traffic to pass to the associated server in this scenario?

- A. Sure connect
- B. Access down
- C. TCP buffering
- D. Down state flush

Correct Answer: B

QUESTION 5

Which mode must an administrator enable to override the routing table on a NetScaler system?

- A. USIP
- B. Edge
- C. Transparent SSL
- D. MAC-based forwarding (MBF)

Correct Answer: D

QUESTION 6

Scenario: A company has contracts with multiple ISPs and would like to use all of them for Internet connections although some ISP routers are faster than others. The company also plans to use a NetScaler system for load balancing and failover.

What can an administrator configure to ensure that all ISP connections are being used while avoiding retransmission or out-of-order packets in this environment?

- A. Multiple VLANs with Ingress rules
- B. Link load balancing with destination IP-based persistence
- C. Round robin load balancing with reverse RNAT configured
- D. A load balancing policy with the appropriate preferred IP and preferred port parameters configured

Correct Answer: B

QUESTION 7

How can an administrator configure a health check for a server receiving HTTP traffic so that it monitors the response code of the server to actual client requests and NOT to probes whenever possible?

- A. Configure an HTTP-ECV monitor.
- B. Configure an HTTP-Inline monitor.
- C. Use the TCP monitor with the transparent parameter selected.
- D. Configure an HTTP monitor with the transparent parameter selected.

Correct Answer: B

QUESTION 8

An administrator needs to configure a health check for Web servers so that the probe fails if the monitor does NOT receive the expected data in the body of the response for an encrypted HTTP request.

How should the administrator configure the health check in the Configuration Utility to meet this requirement?

- A. Add an HTTPS monitor and type in the appropriate HTTPs request and response.
- B. Add an HTTP monitor, select the secure parameter and type in the appropriate HTTP response code.
- C. Add an HTTP monitor, select the secure parameter and type in the appropriate HTTP request and response.
- D. Add an HTTP-ECV monitor, select the secure parameter and type in the appropriate send and receive string.

Correct Answer: D

QUESTION 9

An administrator must first enable the _____ feature before a URL transformation policy can be used in a network environment. (Choose the correct option to complete the sentence.)

- A. rewrite
- B. responder
- C. content filtering
- D. URL transformation

Correct Answer: A

**QUESTION 10**

What must an administrator configure when adding a new SNMP manager to a NetScaler configuration using the Configuration Utility?

- A. Source port
- B. SNMP community string
- C. Source Interface Number
- D. SNMP manager IP address
- E. SNMP Trap Type (Basic or Advanced)

Correct Answer: D

QUESTION 11

Which two options can an administrator leverage when setting the nsroot password during the initial setup of a NetScaler system? (Choose two.)

- A. The Setup Wizard
- B. The passwd command
- C. The set system user command
- D. The add nsroot password command

Correct Answer: AC

QUESTION 12

Scenario: A financial company needs to maintain end-to-end security in network traffic. The company also requires that an administrator reduce the CPU levels for back-end servers in their environment because it requires end-to-end security.

Which setting on the SSL virtual server reduces CPU utilization on the back-end?

- A. SSLv3
- B. SSL Redirect
- C. SSL Session Reuse
- D. SSL Client Certificates

Correct Answer: C

QUESTION 13

Scenario: An administrator is configuring a NetScaler for a network environment where the back- end servers are located on different subnets. The administrator will need to configure the NetScaler to communicate with the different subnets.

Which two steps should the administrator take to maintain the communication between the NetScaler and the back-end servers? (Choose two.)

- A. Enable USIP mode.
- B. Enable Path MTU Discovery.
- C. Ensure USNIP mode is enabled.
- D. Configure SNIPs for the server subnets.

Correct Answer: CD

QUESTION 14

An administrator has configured a virtual server on the NetScaler for www.domain.com.

Which expression should the administrator use in a content switching policy to switch based on the domain?

- A. REQ.HTTP.URL == www.domain.com
- B. REQ.HTTP.URL contains www.domain.com
- C. REQ.HEADER Host contains www.domain.com
- D. REQ.HTTP.HEADER Host == www.domain.com

Correct Answer: D

QUESTION 15

Scenario: An administrator has created a policy expression to identify URLs with the .JSP suffix. The administrator plans to use the policy expression to prevent URLs with the .JSP suffix from being compressed when the HTTP response is received.

How can the administrator associate the policy expression and action to achieve the desired result?

- A. Configure the action, then add a compression policy with the policy expression.
- B. Add a filter with the policy expression and the action specified, then bind the policy.
- C. Configure the action, then add the filter with the policy expression and the action specified.
- D. Add a compression policy with the policy expression and action specified, then bind the policy.

Correct Answer: D
