100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by Citrix
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Scenario: An administrator CANNOT use XenCenter to manage an existing XenServer host in a resource pool. The administrator found that the XenServer host CANNOT communicate properly with XAPI. What could be causing the communication issue on the failed host?

- A. Dom0 is out of space.
- B. NTP is NOT configured.
- C. The root password is unknown.
- D. The host CANNOT connect to Active Directory.

Correct Answer: A

QUESTION 2

Scenario: An administrator of a XenServer pool needs to ensure that virtual machines will be available in the event of a disaster. A backup XenServer implementation is in place in another location; however, there is NO replication available. In preparation for disaster recovery, which step should the administrator perform?

- A. Run the vm-export command.
- B. Run the vm-migrate command.
- C. Take a snapshot of the virtual machines.
- D. Install backup agents on the virtual machines.

Correct Answer: A

QUESTION 3

Scenario: An administrator has three servers in a pool each containing three physical network interface cards (NICs). Currently NIC 0 is used for management, NIC 1 for virtual machine traffic, and NIC 2 for storage traffic. Which network type must the administrator create to access multiple VLANs for virtual machine traffic?

- A. Bonded
- B. External
- C. Cross-server private
- D. Single-server private

Correct Answer: B

**QUESTION 4**

Scenario: An administrator is troubleshooting a Provisioning services environment. After the administrator configured a new version of the vDisk for 10 identical target devices all running on the same XenServer host, the administrator discovers that only the first target device started with the new vDisk configured. The other nine target devices failed to startup.

What is one of the steps the administrator should take to resolve this issue?

- A. Configure the PXE Service.
- B. Configure the bootstrap file.
- C. Restart the Stream Service.
- D. Change the vDisk access mode.

Correct Answer: D

QUESTION 5

Scenario: An administrator installed a new storage repository for use by a XenServer pool. The administrator needs to enable multipathing to connect to the new storage device. What does the administrator need to enable to meet the requirements of the scenario?

- A. High availability
- B. Maintenance mode
- C. Workload balancing
- D. Virtual machine protection policy

Correct Answer: B

QUESTION 6

Scenario: An administrator needs to increase the maximum memory range from 1 GB to 2 GB on a virtual machine configured with dynamic memory control. The virtual machine runs Windows Server 2008, has XenServer tools installed, and it is currently in a running state.

What should the administrator consider prior to adjusting the memory configuration of the virtual machine?

- A. The XenServer host needs to have enough available memory.
- B. XenServer workload balancing needs to be enabled on the host.

- C. The virtual machine needs to be moved to another resource pool.
- D. The virtual machine needs to be restarted in order for the changes to take effect.

Correct Answer: D

QUESTION 7

Scenario: In preparation for adding a new iSCSI SAN to the environment, an administrator needs to separate the storage traffic from the XenServer management traffic. The host is connected to the iSCSI SAN on the 192.168.30.0/24 subnet using NIC 3.

What must the administrator create to separate the storage network traffic?

- A. A bonded network
- B. An external network
- C. A management interface
- D. A single-server private network

Correct Answer: C

QUESTION 8

Scenario: An administrator is moving a XenServer host from the New York datacenter to the London datacenter. During the installation of XenServer, the default NTP settings were selected. How must the administrator ensure that the XenServer host has the correct time settings?

- A. Configure the time in the host BIOS.
- B. Change the time zone using the xsconsole.
- C. Configure the time zone in the ntp.conf file.
- D. Change the NTP servers to the London NTP servers.

Correct Answer: B

QUESTION 9

Scenario: An administrator needs to remove QoS processing from a virtual machine. The virtual machine is experiencing performance issues with web traffic in a XenServer environment with a global QoS policy applied. Which configuration change should the administrator make to satisfy this requirement?

- A. Disable inherited QoS policy

- B. Inherit QoS policy from parent
- C. Apply a QoS limit of 1000 Kbps
- D. Disable the VM Access Control List

Correct Answer: A

QUESTION 10

Scenario: An administrator manages six XenServer hosts in a resource pool in which high availability is enabled. The administrator is notified that host fencing occurred. Which two reasons could be causing the issue? (Choose two.)

- A. CPU utilization reached 90%.
- B. The resource pool is overcommitted.
- C. The shared storage repository was disconnected.
- D. There was a XenServer management network outage.

Correct Answer: CD

QUESTION 11

Scenario: An administrator needs to ensure that the XenServer pool database in a two- server pool is highly available. However, one of the XenServer hosts has failed and is NOT recoverable. The administrator now must re-establish high availability using a new host. The existing host has taken the master role.

Which step should the administrator take to recover the backup pool information to the new XenServer host and ensure that it is highly available with the existing XenServer master?

- A. Add the new host to the existing pool.
- B. Restore the pool metadata to the new host.
- C. Restore the pool metadata to the running host.
- D. Create a new pool and restore the metadata to the new host.

Correct Answer: A

QUESTION 12

Scenario: An administrator needs to add a new server to an existing pool in a remote datacenter. The administrator has

NO access to XenCenter. Which command does the administrator need to use to prepare a XenServer host before adding it to a heterogeneous resource pool?

- A. host-cpu-list
- B. host-sync-data
- C. host-param-set
- D. host-set-cpu-features

Correct Answer: D

QUESTION 13

Scenario: An administrator is planning to introduce 100 new virtual machines into the environment. The administrator plans to use XenServer templates and duplication mechanisms. What must the administrator consider when deciding between the full copy and fast clone duplication mechanisms?

- A. A template needs to be copied before it can be fast cloned.
- B. A virtual machine that is duplicated using the full copy method may impact disk performance.
- C. A virtual machine that is duplicated using the fast cloned method may impact disk performance.
- D. A template created on local storage can be duplicated by using the full copy method by any host in the pool.

Correct Answer: C

QUESTION 14

Scenario: An administrator is making changes to a stand-alone XenServer host and has taken it offline. The virtual machines on that host will be restored to another host.

The administrator needs to the virtual machines to meet the requirements of the scenario. (Choose the correct option to complete the sentence.)

- A. copy
- B. export
- C. protect
- D. migrate

Correct Answer: B

**QUESTION 15**

An administrator needs to upgrade the existing XenServer pool consisting of four hosts to version 6.0. When can the administrator use the rolling pool upgrade wizard?

- A. When upgrading from XenServer 5.6 or later
- B. When XenServer workload balancing is enabled
- C. When the XenServer installation media is unavailable
- D. When there are at least three XenServer hosts in the pool

Correct Answer: A

QUESTION 16

Scenario: An administrator needs to restore a virtual machine from a snapshot. All virtual machines on the XenServer host are stored on a NFS storage repository. Which two methods can the administrator take to restore the virtual machine? (Choose two.)

- A. Use the `xe snapshot-revert` command.
- B. Restore the NFS share from a previous snapshot.
- C. Restore the virtual machine using the XenCenter snapshot module.
- D. Use the XenServer console's "restore virtual machine metadata" function.

Correct Answer: AC

QUESTION 17

Scenario: An administrator tries to start a virtual machine on a host that has an NFS storage repository. The virtual machine gives the error "This virtual machine needs storage that cannot be seen from the server." Which action, within XenCenter, can the administrator take on the NFS storage repository to correct this issue?

- A. Repair
- B. Forget
- C. Detach
- D. Set as default

Correct Answer: A

**QUESTION 18**

Scenario: An administrator of a pool of XenServers has discovered that NOT all XenServers are showing the same time in the event logs. NTP is configured and enabled on all XenServers. The servers are in the same location and use the same NTP server.

From the console of each XenServer, which command should the administrator type to determine if the date and time zone of each server is causing the issue?

- A. date
- B. time
- C. timeutil
- D. tzselect

Correct Answer: A

QUESTION 19

Scenario: A XenServer host has a Fibre Channel adapter which is connected to the corporate SAN. The SAN Administrator created a new LUN and presented it to the XenServer host. Which storage repository type does the administrator need to use to be able to create virtual machines on the LUN?

- A. Local LVM
- B. EXT3 VHD
- C. Hardware HBA
- D. Software iSCSI

Correct Answer: C

QUESTION 20

Scenario: An administrator is installing Provisioning services on a new server. DHCP and PXE servers are already configured. Which option must the administrator select during the initial Provisioning services configuration to configure the PXE Service?

- A. Microsoft DHCP
- B. Other BOOTP or DHCP Service

C. Provisioning services BOOTP Service

D. The service that runs on another computer

Correct Answer: D
