**QUESTION 1**

You expand a business rule component that a colleague added to the BPEL process. You see an Assign element named Facts\_To\_Rule\_Service.

Which statement is true about this Assign element?

- A. It was added automatically based on entries that your colleague made in the dialog box that approved when the business rule component was added to the BPEL model.
- B. Your colleague manually added this Assign element after adding the business rule component to the BPEL Model.
- C. This Assign element was automatically added when your colleague manually added the corresponding Rule\_Service\_To\_Facts assign to the BPEL model.
- D. You can delete this Assign because it was created for documentation purposes only.

Correct Answer: A

Note:

\* Facts\_To\_Rule\_Service : Assigns the facts to a variable.

---

**QUESTION 2**

Identify four steps that are involved in defining a human task.

- A. Setting the task owner
- B. Specifying outcomes
- C. Specifying parameters
- D. Adding the human task to a BPEL process
- E. Specifying the assignment and routing policy
- F. Defining the task in the Workspace web application

Correct Answer: ABCE

The Human Task Editor enables you to define the metadata for the task. The editor enables you to specify human task settings, such as task outcome (B), payload structure, assignment and routing policy (E), expiration and escalation policy,

notification settings, and so on.

Incorrect:

Not D.

Not F.

---

**QUESTION 3**

Which JDeveloper SOA project artifacts have references to the JNDI name of a resource adapter connection factory that is used in the project?

- A. .jca file
- B. .wsdl file
- C. .componentType file
- D. adf-config.xml file

Correct Answer: D

Example:

If the MDS database has a JNDI name, then use the following entries in adf-config.xml:

---

**QUESTION 4**

An invoke activity in a BPEL process is dehydrated \_\_\_\_\_. (select two)

- A. immediately after execution if idempotent is set to True
- B. before execution if idempotent is set to True
- C. immediately after execution if idempotent is set to False
- D. before execution if idempotent is set to False

Correct Answer: CD

---

**QUESTION 5**

Which two configurations provide a certified deployment of multiple SOA domains?

- A. Point all domains to a single SOA Suite schema.
- B. Have separate databases hosting a single SOA Suite schema.
- C. Have a single SOA Suite schema installed on Oracle RAC.
- D. Use Repository Creation Utility (RCU) to create SOA Suite schemas in a single database within unique prefixes.

Correct Answer: AD

Note:

\* Oracle SOA Suite components require schemas that must be installed in the Oracle or Microsoft SQL Server database. You create and load these schemas in your database with the Repository Creation Utility (RCU).

### QUESTION 6

Which statement best describes deploying your SOA application to a cluster?

- A. Manually deploy the application to each managed server in the cluster.
- B. After deployment, restart each managed server in the cluster before the application is available for service.
- C. Use WebLogic Server Administration Console for deployment because you cannot deploy to a cluster from JDeveloper.
- D. Treat your cluster as a single deployment target and let the administration server automatically deploy the application to all managed servers in the cluster.

Correct Answer: D

Note:

\* Oracle SOA Service Infrastructure Cluster-Wide Deployment Composite deployments are stored centrally by the SOA Service Infrastructure in the MDS repository. Each time the SOA Service Infrastructure is started, it synchronizes itself with the MDS repository and SOA store to get the deployment and process state. The deployment coordinator infrastructure orchestrates the notifications for composites deployments and updates. When a new deployment or update takes place, deployment coordinator notifies all members in the cluster. When all members in the cluster confirm that the deployment has succeeded, the master sends a notification to start the composite. If a deployment fails on any one of the nodes, it is rolled back to the rest of the cluster

\* Figure: Cluster-Wide Deployment of Oracle SOA Composites

### QUESTION 7

Which two statements describe the security policy attachment features of Oracle SOA Suite 11g?

- A. The order in which policies are attached to a subject determines the order in which the policies are executed.

- B. JDeveloper groups the policy that can be attached into the five categories of interceptors.
- C. Only one security policy can be attached to a web service at a time.
- D. In JDeveloper, a security policy can be attached to a web service, but it can be marked as either enabled or disabled.

Correct Answer: AD

Note:

\*

If necessary, add additional policies.

You can temporarily disable a policy by deselecting the checkbox to the left of the name of the attached policy. This action does not detach the policy.

\*

You can attach or detach policies to and from service binding components, service components, and reference binding components in a SOA composite application. Use Oracle JDeveloper to attach policies for testing security in a design-time environment. When your application is ready for deployment to a production environment, you can attach or detach runtime policies in Oracle Enterprise Manager Fusion Middleware Control Console.

---

## QUESTION 8

Which two features are provided by decision tables?

- A. Sets of input data can be bucketed and reviewed for gaps.
- B. Data sets can be reviewed for conflicts.
- C. Data can be used for only one rule evaluation.
- D. A rule evaluation can be used only to enter new output data.

Correct Answer: AB

After you create a Decision Table there are operations that you may want to perform on the Decision Table, including the following:

(A)

Find and fix gaps in a Decision Table

(B)

Finding and resolving conflicts between rules in a Decision Table Compact or split cells in a Decision Table Merge a condition or split a condition in a Decision Table

A: \* Compact the Decision Table

In this step you compact the rules to merge from eighteen rules to nine rules. This automatically eliminates the rules that are not needed and preserves the no gap, no conflict properties for the Decision Table.

\* The Conditions area in a Decision Table includes one or more condition rows. Each condition row has a condition expression and, for each rule, a condition cell. A condition expression is an expression that you build in Rules Designer. The condition expression is often a fact property or a function result, but it can be any expression that has a type that can be associated with a bucketset.

B: A Decision Table displays multiple related rules in a single spreadsheet-style view. In Rules Designer a Decision Table presents a collection of related business rules with condition rows, rules, and actions presented in a tabular form that is easy to understand. Business users can compare cells and their values at a glance and can use Decision Table rule analysis features by clicking icons and selecting values in Rules Designer to help identify and correct conflicting or missing cases.

---

### QUESTION 9

Which two are beneficial results of a successful SOA governance initiative?

- A. Maintains a direct connection between business objectives and the production and consumption of services
- B. Provides technical standards for the creation of web services.
- C. Prevents the proliferation of services of questionable utility, reliability and business value
- D. Develops strategy maps and value-chain analyses that help define business requirements

Correct Answer: AC

---

### QUESTION 10

A partner needs to access services that are defined in one of your Service Composite Architecture (SCA) applications via a web service interface. Which approach (and accompanying reasoning) describes a loosely coupled and robust solution?

- A. Use Oracle Service Bus to provide an Interface layer over your SCA application. This enables you to hide the locations of your SCA application, perform load-balancing across those endpoints, and provide the ability to define service level agreements to help ensure that you are meeting your contractual obligations to the partner.
- B. Use the Mediator component to provide a web service interface to your SCA application. This arrives you the flexibility of using the industry standard XSLT technology to perform translation and transformations.
- C. Use Oracle Service Bus to provide an interface layer over your SCA application. This enables you to "skin" your SCA application with a web service interface and still provide a robust experience to the partner.
- D. Allow the partner simply to connect directly to the SCA application. This provides the best performance and helps keep the partner happy.

Correct Answer: A

\*

Oracle Service Bus supports the following capabilities for the transformation or processing of messages:

/ Transforms messages based on XQuery or XSLT etc: Validates incoming messages against schemas Selects a target service or services, based on the message content or message headers Transforms messages based on the target service Supports transformations on both XML and MFL messages Message enrichment Supports callouts to Web

services to gather additional data for transformation (for example, country code, full customer records, and so on)

\*

Oracle Service Bus Intermediary

### QUESTION 11

In a BPEL model, what is the quickest way to implement a capability to skip rule execution if a particular condition holds?

- A. Model a switch activity to conditionally execute the business rule component.
- B. Use a skip condition on the business rule component.
- C. Include an XPath expression in an annotation on the business rule component.
- D. Use a correlation set on the business rule component.

Correct Answer: C

### QUESTION 12

You have defined an event. You now want to trigger that event from an existing Mediator component.

How do you link the event to the Mediator so that the Mediator can raise the event to the Event Delivery Network (EDN)?

- A. Use the SOA Composite Editor to specify the event as a property on the incoming wire into the Mediator component.
- B. Use a text editor to modify the .edl file that defines the event so that the Mediator is identified as a publisher.
- C. Use the SOA Composite Editor to add a raise action to the Mediator's .mplan specification file.

D. Use Enterprise Manager to associate the Mediator with the appropriate event.

Correct Answer: C

Note:

\* What Happens When You Create and Subscribe to a Business Event

The source code below provides details about the subscribed event of the Oracle Mediator service component.

Example, Subscribed Event
