QUESTION 1

Scenario: The company is designing a cost-efficient environment for the call center workers. The IT department is replacing the existing thin clients with newer models.

What are the benefits of using Hosted VDI and manually installing the operating system?

- A. Highest user density and lowest cost
- B. Highest level of user personalization
- C. Lowest storage performance requirement and highest user density
- D. Lowest cost and highest application compatibility

Correct Answer: B

QUESTION 2

Scenario:

CGE decided to virtualize its infrastructure workloads and provide a virtual solution to all end users. The infrastructure workloads include Delivery Controllers, StoreFront servers, License Servers, and Microsoft SQL Servers for databases.

What are the benefits of using Hosted VDI by using cloned VM templates?

- A. It provides the highest end-user density at the lowest cost.
- B. It offers the greatest level of end-user personalization and control.
- C. It offers the lowest storage performance requirement and the highest end-user density.
- D. It facilitates rapid provisioning.

Correct Answer: D

QUESTION 3

How should the architect specify that StoreFront logs are collected?

- A. By enabling tracing and automating collection of log files
- B. By enabling tracing and monitoring Windows Event logs
- C. By gathering data from the IIS Manager console and archiving it on a network share
- D. By enabling the SmartAuditor feature and IIS logging

Correct Answer: A

QUESTION 4

How should the components be set up for this environment?

- A. Configure a NetScaler cluster. Place the StoreFront servers and Delivery Controllers in the internal network.
- B. Configure NetScaler high availability. Place the StoreFront servers and Delivery Controllers in the internal network.
- C. Configure a back-up vServer. Place the StoreFront servers and Delivery Controllers in the internal network.
- D. Configure GSLB for the StoreFront servers and Delivery Controllers and place them in the internal network.

Correct Answer: A

QUESTION 5

Which aspect of the new storage system's performance requirements is critical to the success of the project and should be determined before any purchase takes place?

- A. Whether it supports automatic tiering
- B. The number of SSD drives it will hold
- C. Whether 8Gb/s Fibre Channel or 10Gb/s Ethernet technology provides more storage bandwidth
- D. The number of IOPS it must support to host the required amount of pooled and dedicated virtual desktops

Correct Answer: A

QUESTION 6

Scenario: CGE acquires a small energy company that is running MGMT, a proprietary 16-bit application. A Citrix Architect is tasked with deploying this application to the Executives/Management end-user group. The CIO mandates that a FlexCast model must be chosen that resembles this end-user group's existing delivery strategy. It is important that a single-image deployment is utilized and that management effort is kept to a minimum for the update process. The availability of a fast rollback plan must also be available after upgrades, since it can often result in system instability. Why is deploying MGMT in a Remote PC environment on Windows 8 with Machine Creation Services the best solution?

- A. It offers a faster change process.
- B. End users are already comfortable working in a shared environment.
- C. It prevents XenApp server crashes.
- D. It enables faster rollbacks.

Correct Answer: B

QUESTION 7

Why does using PowerShell help the company comply with its security policy?

- A. Because PowerShell has a commandlet for running queries from Citrix Director
- B. Because it enables automated report delivery
- C. Because it enables PDF-based reports
- D. Because it collects logs from multiple devices

Correct Answer: A

QUESTION 8

Scenario: Users from a remote research lab have very limited WAN bandwidth to their nearest datacenter. The users need to print over the WAN.

What should an architect recommend to optimize printer bandwidth?

- A. Optimize WAN traffic through CloudBridge.
- B. Increase the WAN bandwidth through a WAN link upgrade.
- C. Restrict overall session bandwidth through a HDX bandwidth policy.
- D. Restrict printer redirection bandwidth through a HDX bandwidth policy.

Correct Answer: A

QUESTION 9

Scenario:

CGE needs to define its management process for desktop image releases. Some groups need a process for version control that includes thorough testing prior to production. Why does using Provisioning Services and enabling vDisk Update Management help manage the image versioning process?

- A. It automatically upgrades virtual desktops to the latest OS version.
- B. It provides centralized, single-image management with rollback.
- C. It is compatible with the Microsoft VHD specification.
- D. It automatically deploys the latest target device drivers.

Correct Answer: C

**QUESTION 10**

Why would the architect choose XenServer MPIO when configuring bonded network interfaces for guest VM networks?

- A. It provides load balancing of VM traffic across multiple physical NIC interfaces at a per guest basis, and offers improved distribution of traffic across physical interfaces in the bond.
- B. It sends all guest VM traffic in the bond to an active interface, which provides the best distribution of network load.
- C. It uses a hashing algorithm, which provides better distribution of traffic across the interfaces in the bond.
- D. It uses a round robin load-balancing policy, which provides better distribution of traffic across the interfaces in the bond.

Correct Answer: C

QUESTION 11

Scenario: CGE acquires a small energy company that is running MGMT, a proprietary 16-bit application. A Citrix Architect is tasked with deploying this application to the Executives/Management end-user group. The CIO mandates that a FlexCast model must be chosen that resembles this end-user group's existing delivery strategy. It is important that a single-image deployment is utilized and that management effort is kept to a minimum for the update process. The availability of a fast rollback plan must also be available after upgrades, since it can often result in system instability. Why is deploying MGMT as Hosted VDI Random the best solution?

- A. It allows the installation of custom applications.
- B. It is easy to manage.
- C. It meets the high-performance application demands of the Executives/Management end-user group.
- D. It allows the Executives/Management end-user group to share desktops.

Correct Answer: C

QUESTION 12

How should a hosted shared environment be implemented to allow user-installed applications?

- A. By adding users to the Local Administrators group
- B. By using Personal vDisk
- C. By adding users to the Remote Desktop Users Group
- D. By providing access to the network share that contains the App-V packages

Correct Answer: D

**QUESTION 13**

A Citrix Architect reviewed CGE\\'s antivirus policy and found that it does NOT comply with the posted Citrix antivirus recommendations.

What should the architect recommend be added to CGE\\'s antivirus policy?

- A. Enable scanning of network drives.
- B. Disable real-time scanning on Citrix XenApp servers.
- C. Scan all excluded files during the scheduled periodic scan.
- D. Exclude the user profile storage location from antivirus scanning.

Correct Answer: C

QUESTION 14

Why is hypervisor high availability an essential component of a production database server?

- A. Because the Delivery Controller is stateless
- B. Because server maintenance can be performed online
- C. Because it prevents local host cache corruption
- D. Because user data loss is prevented if a session is disconnected

Correct Answer: A

QUESTION 15

Scenario:

CGE wants to upgrade to SQL Server 2014 in order to support backend SQL databases that will support the next Citrix environment. The key requirement is high availability for all nodes in the different geographical regions.

Individuals in the Research end-user group need to be able to remotely access a centrally stored database.

Which FlexCast model should the Citrix architect recommend for this group?

- A. Hosted Shared
- B. Hosted VDI
- C. Streamed VHD
- D. Local VM

Correct Answer: B
