**QUESTION 1**

Scenario: Employees at a company can access Microsoft Outlook 2010 and Adobe Reader offline. These employees complain that they CANNOT view PDF files when they receive emails containing attached PDF files.

Which action can the administrator take to solve this problem?

- A. Publish the two applications with the same settings from the AppCenter.
- B. Precache the two packages on the users\' computers instead of streaming them at launch time.
- C. Create a new streaming profile to publish that links the Office 2010 streaming package with the Adobe Reader streaming package.
- D. When profiling, choose \'Advanced Install - Select files and folders\' and copy the application executables from the two applications into each application profile.

Correct Answer: C

QUESTION 2

Scenario: An administrator manages a server farm containing nine servers. The servers are organized into three worker groups based on the geographic location of the users accessing the applications. Users in all

geographic locations are accessing the applications in the server farm 24 hours a day, seven days a week.

The administrator would like to restart the servers on a regular basis.

Which two tasks should the administrator perform to automate the restarting of the servers without impacting user access? (Choose two.)

- A. Create zones for the servers in each worker group.
- B. Configure reboot policies and apply them to the appropriate worker groups.
- C. Create three worker groups containing a server from each existing worker group.
- D. Configure the Health Monitoring policy and apply it to the appropriate worker groups.
- E. Configure the Citrix IMA Service test to restart the servers and apply it to the appropriate worker groups.

Correct Answer: BC

QUESTION 3

Scenario: Users from the Sales department have raised complaints to the company\'s CEO, arguing that launching the CRM application on a XenApp server takes a significant amount of time and is impacting their productivity. The IT Administrator has been asked to investigate the situation and find a solution to the problem. The administrator concludes that the creation of a session is being critically impacted due to profile loading and logon scripts, resulting in the one- to two-minute individual session creation times for sales users.

Which two steps could the administrator take to resolve the session issues in order to improve the user experience when connecting to the XenApp environment? (Choose two.)

- A. Configure Just-in-Time Pre-launch for users in the Sales department.
- B. Configure a Scheduled Pre-launch for users launching the CRM application.
- C. Eliminate User profiles and disable all logon scripts for the users in the Sales department.
- D. Add additional memory to the end-point computers used by the users in the Sales department to connect to the XenApp published application.

Correct Answer: AB

QUESTION 4

Scenario: Users in an environment connect to the XenApp farm from Linux based thin clients. They report that they are NOT able to access the computer-based training course hosted on the XenApp server in the Microsoft Media Format (MMS). Windows-based users are NOT reporting this issue.

What could the administrator do to resolve this issue?

- A. Disable host (server) to client redirection.
- B. Require the Linux thin clients to use the Java client.
- C. Ensure these thin clients have the latest Receiver client for Linux.
- D. Create a XenApp policy to enable HDX Flash redirection for the Linux thin clients.

Correct Answer: A

QUESTION 5

Scenario: Three Web Interface sites are configured on different servers in a farm. The administrator wants to ensure that users are always able to access their applications through the Citrix Receiver.

How can the administrator configure the Web Interface sites to meet this requirement?

- A. Enable site redirection for the sites.
- B. Configure backup URLs for the sites.
- C. Configure the direct access method for the sites.
- D. Configure the '\\bypass any failed server for\\' setting for the sites.

Correct Answer: B

QUESTION 6

A Senior Administrator wants to give a Junior Administrator complete rights to a folder of applications while restricting some of his permissions to the overall farm. The Senior Administrator must grant _____. (Choose the correct option to complete the sentence.)

- A. Custom Permissions at the farm level and folder level
- B. Read Only Permissions at the farm level and Full Permissions at the folder level
- C. Custom Permissions at the farm level, then Full Permissions within the application folder
- D. Full Permissions at the farm level and then Custom Permissions within the application folder

Correct Answer: C

QUESTION 7

Scenario: A server farm consists of dual- and single-processor servers. The administrator wants to ensure that the dual-processor servers receive more sessions than the single-processor servers. In addition, the administrator wants to ensure that no server receives more than 100 user sessions.

In order to meet these requirements, the administrator must assign the _____. (Choose the correct option to complete the sentence.)

- A. custom load evaluator rule to all servers
- B. advanced load evaluator rule to all servers
- C. custom load evaluator rule to all dual-processor servers
- D. advanced load evaluator rule to all dual-processor servers

Correct Answer: A

QUESTION 8

Scenario: An administrator wants users in their two regions to utilize the XenApp servers in their own region to get the best performance from their applications but automatically fail over to the alternate region. The administrator creates an Active Directory group for each region.

The administrator should create _____ and _____. (Choose the correct pair of options to complete the sentence.)

- A. one worker group; one load balancing policy
- B. two worker groups; one load balancing policy
- C. one worker group; two load balancing policies
- D. two worker groups; two load balancing policies

Correct Answer: D

**QUESTION 9**

Scenario: An administrator has configured three Web Interface sites. The sites are configured to fail over to another site if a site failure occurs. After a failure occurs, the failing site is NOT available for connections for one hour. The administrator wants to lessen the amount of time that the failing site is unavailable.

What can an administrator do to lessen the amount of time the site is unavailable?

- A. Adjust the '\\socket timeout\\' setting
- B. Adjust the '\\bypass any failed server\\' setting
- C. Configure the '\\disconnected session timer\\' setting
- D. Configure Health Monitoring and Recovery to restart the server upon failure

Correct Answer: B

QUESTION 10

When using the Gateway Direct secure access method in the Web Interface, the XenApp administrator must provide the _____ of the Access Gateway server. (Choose the correct option to complete the sentence.)

- A. IP address
- B. SSL certificate
- C. NetBIOS name
- D. Fully Qualified Domain Name (FQDN)

Correct Answer: D

QUESTION 11

The IT Director has approved the use of Apple iPad to access the corporate customer database system when the devices are connected to the local wireless network.

Which type of Web Interface site must be configured to allow iPad users to access the customer database system published on the XenApp servers?

- A. XenApp Web site
- B. XenApp Services site
- C. XenApp Services site with dual-factor authentication only
- D. XenApp Services site with pass-through authentication only

Correct Answer: B

**QUESTION 12**

Scenario: A company has 20 machines and 20 users. The 20 users are split into two shifts so that only 10 people are connected to the XenApp 6.5 farm at any one time. Now, a third shift of 10 new users is being added.

In order to ensure that the 10 new users can get connected to XenApp 6.5, the administrator must purchase and install 10 additional _____. (Choose the correct option to complete the sentence.)

- A. client machines
- B. XenApp 6.5 concurrent licenses
- C. Microsoft Remote Desktop Services user client access licenses
- D. Microsoft Remote Desktop Services machine client access licenses

Correct Answer: C

QUESTION 13

Which step(s) should an administrator take to publish applications that will be accessed through Web Interface and presented in different folders?

- A. Publish the applications as Content instead of Applications.
- B. Create a folder under the Application node and put the specific applications in the folder.
- C. In the application properties, in the location section, change the working directory to match the folder name.
- D. In the application properties, in the Shortcut presentation section, fill in a name for the Client application folder.

Correct Answer: D

QUESTION 14

Scenario: An administrator has published Microsoft Excel on two identical servers and has placed those servers in a worker group. There are 150 users in the environment, and each server must be allowed to accept all 150 user sessions for failover purposes. All users start work at

09:00

in the morning. The administrator also wants to prevent the servers from failing due to excessive connection attempts during this logon time. What can the administrator do to ensure that the server farm can meet these requirements?

- A.
Assign the default load evaluator to the worker group.
- B.
Assign the advanced load evaluator to the worker group.
- C.

Create a load balancing policy and assign it to the worker group.

D.

Create a custom load evaluator and assign it to the worker group.

Correct Answer: D

QUESTION 15

Scenario: An administrator manages a XenApp farm that uses Citrix Provisioning Services to automate the addition of XenApp servers to the farm. The administrator must implement a solution to automate the addition of new servers to the published resources, load evaluators, Citrix policies and load balancing policies.

Which two should the administrator configure to meet the requirements of the scenario? (Choose two.)

A. Zones

B. Policies

C. Worker groups

D. Load evaluators

Correct Answer: BC
