**QUESTION 1**

View the Exhibit You have defined a compare validation rule on the CommissionPct attribute of the Employees entity object such that Commission must be greater than zero. How would you define that the validation rule applies only to those with the JobId "SA\_MAN" using the declarative features of ADF Business Components? (Choose the best answer.)

Attribute: CommissionPct  
Operator: GreaterThan  
Compare With: Literal Value  
Enter Literal Value  
0.1

- A. Remove the current validator and, instead, write a method validator in Java and use an if statement to check the value of JobID.
- B. Remove the current validator and, instead, write a script validator using Groovy and use an if statement to check the value of JobID.
- C. Remove the current validator and, instead, write a regular expression validator to check the value of JobID
- D. The entity object has a Validation Execution tab and you use this to set a conditional execution expression JobId = "SA\_MAN".
- E. Change the literal value in the current validation rule to be if JobId = SA\_MAN then return 0.1 else return null.

Correct Answer: B

**QUESTION 2**

Which two statements describe the characteristics of a view object?

- A. it represents a row in the specified database table.
- B. it represents an association between two entity objects.
- C. it encapsulates a SQL query and simplifies working with data from a database.
- D. it allows data to be ordered based on an ORDER clause.
- E. it must include every attribute defined in an underlying entity object.

Correct Answer: D

**QUESTION 3**

Which three options does an entity object automatically implement? (Choose three.)

- A. primary key functionality based on any column in the database that is marked as a primary key
- B. not-null functionality based on any column in the database that is marked as not null
- C. attribute precision based on column size
- D. all table check constraints
- E. any table triggers

Correct Answer: ABC

---

**QUESTION 4**

What should be in a managed bean, rather than a backing bean? (Choose the best answer.)

- A. code that manipulates the color of a text field on a JSF page
- B. data that is used to decide if a field is shown as mandatory or not
- C. data that is used on another page in the task flow
- D. code that opens a pop-up in the page

Correct Answer: C

---

**QUESTION 5**

What is the first step you perform to secure an ADF application? (Choose the best answer.)

- A. Edit the web.xml file and adf-config.xml file to include the ADF authentication servlet configuration.
- B. Merge the application roles into the deployment server's roles.
- C. Define a lifecycle listener to intercept the HTTP request for the application's URL
- D. Use the Configure ADF Security wizard to enable security for the application.
- E. Create a login page and run the application authenticated as the test-all user.

Correct Answer: D

---

**QUESTION 6**

Consider the following code:

At run time, a user modifies the value in the af:inputText control, then presses afcommandButton

Assuming no errors are raised, which option represents the managed bean code invoked in the correct order? (Choose the best answer.)

- A. myBean.handleChange, myBean.doAction, myBean.getDestination
- B. myBean.doAction, myBean.handleChange, myBean.getDestination
- C. myBean.handleChange, myBean.doAction
- D. myBean.doAction, myBean.handleChange

Correct Answer: C

---

### QUESTION 7

View the Exhibit

What does the SetCurrentRowWithKey activity do for this task flow? (Choose the best answer.)

- A. calls a method
- B. calls the updateCustomer page
- C. determines whether the user is navigated to the updateCustomer or callEmployeeTF activity
- D. displays a pop-up that allows the user to enter a value for the current row

Correct Answer: B

---

### QUESTION 8

you access a page in your auh application mat refers to Dinaings caning auh business components.

Which statement is true at run time about the ADF Business Component application module? (Choose the best answer.)

- A. An application module is automatically instantiated (or each user session and allocated to that user for the life of their session).
- B. The programmer must instantiate an application module in a JSF managed bean and carry the application module for the life of the user session.
- C. One application module bean is instantiated and shared by all user sessions.
- D. An application module instance is checked out of the application module pool and given to the user session for at least that request, or longer depending

Correct Answer: A

---

### QUESTION 9

Which two statements are true about the Key Exists validator? (Choose two.)

- A. it always issues a select to the database to ensure all data is up to date.
- B. it first checks the cache for match and then goes to the database only if necessary.
- C. it cannot validate any data changes that happened in the current transaction that have not yet been committed to the database.
- D. it can validate any data changes that happened in the current transaction that have not yet been committed to the database.
- E. it can be used only with attributes that are defined as primary keys in the database.

Correct Answer: BD

---

### QUESTION 10

When creating a bounded task flow that uses ADF Business Components, which two steps do you need to perform to enable the task flow to manage its own transaction"? (Choose two.)

- A. Define transaction properties at the task-flow level
- B. Include a phaseListener in a managed bean with methods for commit and rollback
- C. Add the application module commit and rollback operations as buttons or links on the last JSF page of the flow
- D. Define task flow return activities in the flow and associate "End transaction" attribute values with them

Correct Answer: AD

---

### QUESTION 11

The current page includes the following entries in its page definition file:

Programmatically, in a managed bean, you need to read the current EmployeesView's email into a string.

You write the following code to do this:

```
DCBindingContainer be = (DCBindingContainer)BindingContext.getCurrent  
().getCurrentBindingsEntry();  
XXXXXX emailBinding =
```
