QUESTION 1

Protocols are used by computer networks to communicate or exchange data. A data communication protocol is a set of rules that must be followed by electronic devices to communicate with each other. Which three describe these sets of rules? (Choose three.)

A. Transport - Manages the connections between cooperating applications

B. Timing - Speed matching and sequencing

C. Application - Handles the detail and functions

D. Internet - Manages data addressing

E. Syntax - Data format and coding

F. Semantics - Controls information and error handling

Correct Answer: BEF

QUESTION 2

Place each file name or identifier on its corresponding action.

Select and Place:

Correct Answer:

Place each IPv6 address type on its address description.

Address Descriptions	IPv6 Address Types
Routable inside an organization	Link local
Routable to the Internet	Site local
Same subnet only	Aggregatable global

QUESTION 3

An unauthorized administrator has recently made some changes to and rebooted your server. As a result, the server is using ARP to attempt to reach hosts on a different subnetwork. Which file has been erroneously modified?

A. /etc/inet/hosts

B. /etc/inet/services

C. /etc/inetd.conf

D. /etc/init.d/inetinit

E. /etc/netgroup

F. /etc/inet/netmasks

Correct Answer: F

QUESTION 4

Each DNS zone must have a primary server. What are two features of a DNS primary server? (Choose two.)

A. They are never authoritative for any domain, except for the loopback address.

B. They maintain data about each of the top-level zones.

C. They provide update information and synchronize secondary servers when the secondary servers request information.

D. They are the system on which all changes are made to the zone.

Correct Answer: CD

QUESTION 5

You are creating a plan to increase network security. Which two network topologies and devices should be phased out? (Choose two.)

A. hub

B. bus

C. switch

D. bridge

E. VLAN

Correct Answer: AB

QUESTION 6

Place the address fields of an aggregatable global unicast address in the correct order.

Select and Place:

Correct Answer:

Place the address fields of an aggregatable global unicast address in the correct order.

Aggregatable Global Address Format

Interface ID	001	NLA	SLA	TLA

Address Fields

QUESTION 7

A network administrator configured an NTP server and an NTP client, but the client is refusing to synchronize with the server. The client and server clocks have drifted too much for the xntpd daemon to align them and for the NTP protocol to synchronize them. Which two tools will synchronize the two systems? (Choose two.)

A. rdate

B. ntptrace

C. zdate

D. ntpdate

E. syncdate

Correct Answer: AD

QUESTION 8

The UDP Transport layer protocol receives data from the application and encapsulates the data in UDP datagrams. UDP datagrams have a leading header section.

Place the items on the appropriate UDP header section.

Note: Only four items are used.

Select and Place:

The UDP Transport layer protocol receives data from the application and encapsulates the data in UDP datagrams. UDP datagrams have a leading header section.

Place the items on the appropriate UDP header section.
Note: Only four items are used.

Items

| Checksum |
| Destination Port |
| Datagram |
| Length |
| Type |
| Source Port |
| Data |

| First | Second |
| Third | Fourth |

UDP Header Section

Done

Correct Answer:

The UDP Transport layer protocol receives data from the application and encapsulates the data in UDP datagrams. UDP datagrams have a leading header section.

Place the items on the appropriate UDP header section.
Note: Only four items are used.

Items

| Checksum |
| Destination Port |
| Datagram |

| Length | Type |
| Source Port | Data |

UDP Header Section

Done

QUESTION 9

You have a SPARC workstation with a single hme Ethernet interface. Which file is required for the interface to be configured at boot time?

A. /etc/nodename.hme0

B. /etc/nodename

C. /etc/inet/hosts

D. /etc/hosts

E. /etc/hostname.hme0

Correct Answer: E

QUESTION 10

You have configured an IPv6 router that is having problems routing correctly to a default router connected to the Internet. You need to investigate the machine\\'s routing table and check that the default route is in place. You also need to check the neighbor cache to see whether the MAC address of the default router has been learned. Which two commands enable you to perform these tasks? (Choose two.)

A. netstat -r

B. arp -n

C. netstat -m

D. netstat -p

E. ifconfig -a

Correct Answer: AD

QUESTION 11

A Solaris 10 OS server has packet filtering enabled. Which command displays information on stdout regarding packets that match rules?

A. syslogd -d sysout

B. ipmon

C. ipf -l block

D. netstat -a block

Correct Answer: B

QUESTION 12

Resource records are entries contained in the name server zone files.

The general format of any resource record is:

[name] [ttl] class type data

Place the record type in its place to complete the resource record.

Select and Place:

Resource records are entries contained in the name server zone files.

The general format of any resource record is:

[name]   [ttl]   class   type   data

Place the record type in its place to complete the resource record.

Resource Record

1.1.168.192   IN   Place here   sys-gw.myname.edu.

Record Types

SOA	NS	A
PTR	CNAME	AAAA

Done

Correct Answer:

Resource records are entries contained in the name server zone files.

The general format of any resource record is:

[name] [ttl] class type data

Place the record type in its place to complete the resource record.

Resource Record

1.1.168.192   IN   [CNAME]   sys-gw.myname.edu.

Record Types

SOA	NS	A
PTR		AAAA

[Done]
